Chapter 1

VXG Cloud Agent Library

- 1. Build system
- 2. Library compilation
- 3. Application development
- 4. API reference

Chapter 2

Build System

2.0.1 Overview

VXG Cloud Agent library uses Meson build system as a modern, fast and flexible build system that supports easy to set up and maintain a cross-compilation process.

It's recommended to refer to the Meson guide.

2.0.2 C++ Toolchain Requirements

IMPORTANT: This projects requires C++ toolchain with C++11 support

VXG Cloud Agent Library requires modern C++11 so in order to build and use this library the user needs a compiler with C++11 support.

GCC supports C++11 since version 4.8.1 released on May 31, 2013.

C++11 Support in GCC

GCC 4.8.1 was the first feature-complete implementation of the 2011 C++ standard, previously known as C++0x.

This mode can be selected with the -std=c++11 command-line flag, or -std=gnu++11 to enable GNU extensions as well.

2.0.3 Build system installation

IMPORTANT: This projects requires Meson version >= 0.56.0

It's recommended to use Ubuntu 20.04 LTS distribution in development process but other distributions or operation systems are also supported by Meson.

Please refer to Meson installation guide to get and install Meson, preferable way to install Meson is pip method.

Quick install guide for Ubuntu 20.04. If you have an old version of meson already installed please remove it first.

```
sudo apt-get update sudo apt-get install -y python3-pip git ninja-build curl tzdata python3-tz pip3 install git+https://github.com/mesonbuild/meson@0.56.0 # pip3 puts meson main script into the $HOME/.local/bin/ directory, you need to # add $HOME/.local/bin/ into your PATH environment variable, for bash shell you # can run the following command and restart the shell session. echo 'export PATH=$HOME/.local/bin:$PATH' >> $HOME/.bashrc # Check currently installed meson version
```

4 Build System

Chapter 3

Application Development

3.1 Overview

An application that uses VXG Cloud Agent Library should implement 3 classes derived from the base classes provided by the library:

- · agent::callback common callbacks class, only on_bye callback is mandatory for implementation
- agent::media::stream class, abstract class for media streams, library provides basic media::rtsp_stream implementation which retransmits RTSP source stream to the endpoint of the VXG Cloud, all callbacks are stubbed. Developer normally should implement own class derived from the media::stream with own vxg::media::Streamer::ISource implementation(vxg::media::ffmpeg::Source class implementation from the ffmpeg_source.cc can be used as a reference), or if RTSP source is acceptable developer can implement own class derived from the media::rtsp_stream but with callbacks implemented.
- agent::event_stream class, abstract class for events generation.

Any callback implementation as well as ISource::init and ISource::finit implementations should be non-blocking, VXG Cloud messages processing is single-threaded which means any VXG Cloud messages are handled sequentially hence no new message will be processed until the callback triggered by the previous message is returned.

The library provides the stub implementation for most of the virtual methods of these classes, the stub implementation prints a log message about this method is not implemented and returns an error, the final application should implement all virtual methods on its own.

Most of the callbacks are just getter/setter for the library's objects.

3.2 Examples

3.2.1 Minimal application example

Headers and namespaces:

```
#include <agent/manager.h>
#include <agent/rtsp-stream.h>
#include <utils/logging.h>
#include <utils/properties.h>
using namespace vxg::cloud;
using namespace vxg::cloud::agent;
```

Common callbacks class, minimal implementation derived from the agent::callback class:

```
using namespace vxg::cloud;
class agent_callback_minimal : public agent::callback {
public:
    virtual void on_bye(proto::bye_reason reason) override {
        vxg::logger::warn("Connection close {}", json(reason).dump());
    }
    virtual void on_registered(const std::string& sid) override {
        // Save Cloud registration session id in the local properties file.
        // This is required for the fast reconnection to the Cloud.
        props.set("prev_sid", sid);
    }
};
```

Create and start agent object agent::manager with one basic media stream agent::media::rtsp_stream

```
using namespace vxg::cloud::agent;
// Agent
manager::ptr agent;
// VXG Cloud token
auto access token =
   proto::access_token::parse(vxg_cloud_token);
// Agent callback
callback::ptr cb = std::make unique<agent callback minimal>();
// Media stream
std::vector<agent::media::stream::ptr> streams;
media::stream::ptr stream =
   std::make_shared<media::rtsp_stream>(rtsp_url, "DemoStream");
streams.push_back(stream);
// Create agent
if ((agent = agent::manager::create(agent_config, std::move(cb),
                                    access_token, streams)) == nullptr) {
    vxg::logger::error("Failed to create agent");
    return EXIT_FAILURE;
if (!quit && !agent->start())
   quit = true;
```

Complete minimal example:

```
#include <signal.h>
#include <args.hxx>
#include <agent/manager.h>
#include <agent/rtsp-stream.h>
#include <utils/logging.h>
#include <utils/properties.h>
using namespace vxg::cloud;
using namespace vxg::cloud::agent;
agent::config agent_config;
static bool quit = 0;
static vxg::properties props;
#if !defined(_WIN32)
static void signal_handler(int sig) {
   if (sig == SIGINT || sig == SIGTERM) {
      fprintf(stderr, "\nSIGTERM received\n\n");
#endif
using namespace vxg::cloud;
class agent_callback_minimal : public agent::callback {
    virtual void on_bye(proto::bye_reason reason) override {
        vxg::logger::warn("Connection close {}", json(reason).dump());
    virtual void on registered(const std::string& sid) override {
        // Save Cloud registration session id in the local properties file.
         // This is required for the fast reconnection to the Cloud.
        props.set("prev_sid", sid);
std::string vxg_cloud_token;
std::string rtsp_url;
bool parse_args(int argc, char** argv) {
    args::ArgumentParser parser("This is a test program.", "");
    args::HelpFlag help(parser, "help", "Display this help menu", {'h', "help"});
    args::CompletionFlag completion(parser, {"complete"});
    args::Options::Required);
    args::Positional<std::string> url(parser, "rtsp_url", "RTSP stream url", "",
                                         args::Options::Required);
    args::Flag secure_connection_arg(
        parser, "",
         "Use secure cloud connetion(enables encryption, cloud agent library "
         "must be compiled with openssl support enabled)",
```

3.2 Examples 7

```
{"secure-channel", 's'});
        parser.ParseCLI(argc, argv);
        vxg_cloud_token = args::get(token);
        rtsp_url = args::get(url);
        agent_config.insecure_cloud_channel =
           !args::get(secure_connection_arg);
    } catch (const args::RequiredError& e) {
        std::cout « e.what() « std::endl;
        return false;
    } catch (const args::Completion& e) {
        std::cout « e.what();
         return false;
    } catch (const args::Help&) {
        std::cout « parser;
         return false;
    } catch (const args::ParseError& e) {
        std::cerr « e.what() « std::endl;
std::cerr « parser;
        return false;
    return true;
int main(int argc, char** argv) {
    vxg::properties::reset("agent-test.props");
    // Try to load and set previously saved session id.
// This is required for the fast reconnection to the Cloud.
    if (!props.get("prev_sid").empty())
        agent_config.cm_registration_sid = props.get("prev_sid");
    // Parse args and retrieve token and rtsp url
    if (!parse_args(argc, argv))
         return EXIT_FAILURE;
#if !defined(_WIN32)
    // Catch signal
    signal(SIGINT, signal_handler);
    signal(SIGTERM, signal_handler);
signal(SIGPIPE, SIG_IGN);
    vxg::logger::info("VXG Cloud Agent Library Version: {}",
                        vxg::cloud::agent::version());
    using namespace vxg::cloud::agent;
    // Agent
    manager::ptr agent;
    // VXG Cloud token
    auto access_token =
        proto::access_token::parse(vxg_cloud_token);
    // Agent callback
    callback::ptr cb = std::make_unique<agent_callback_minimal>();
    // Media stream
    std::vector<agent::media::stream::ptr> streams;
    media::stream::ptr stream =
        std::make_shared<media::rtsp_stream>(rtsp_url, "DemoStream");
    streams.push_back(stream);
    // Create agent
if ((agent = agent::manager::create(agent_config, std::move(cb),
                                            access_token, streams)) == nullptr) {
         vxg::logger::error("Failed to create agent");
        return EXIT_FAILURE;
    if (!quit && !agent->start())
        quit = true;
    // Spin main thread until stopped
    while (!quit) {
        std::this_thread::sleep_for(std::chrono::seconds(1));
    agent->stop();
    agent = nullptr;
vxq::logger::info("Agent stopped");
    return EXIT_SUCCESS;
```

3.2.2 Complete application example

Common callback class: derived from agent::callback

```
using namespace vxg::cloud;
class my_agent_callback : public agent::callback {
public:
    virtual void on_registered(const std::string& sid) override {
        // Save Cloud registration session id in the local properties file.
        // This is required for the fast reconnection to the Cloud.
        props.set("prev_sid", sid);
}
```

```
virtual void on_bye(proto::bye_reason reason) override {
    if (reason != proto::bye_reason::BR_RECONNECT)
         vxg::logger::error("Error {}", json(reason));

    proto::event_object::snapshot_info_object& snapshot) override {
    vxg::logger::warn("{} not implemented", __func__);
         return false;
    virtual std::vector<proto::video_clip_info> record_get_list(
        vxg::cloud::time begin,
         vxg::cloud::time end,
        bool align) override {
         std::vector<proto::video_clip_info> empty_vector(0);
         vxg::logger::warn("{} not implemented", __func__);
         return empty_vector;
    virtual proto::video_clip_info record_export(
         vxg::cloud::time begin,
         vxg::cloud::time end) override {
        proto::video_clip_info clip;
         vxg::logger::warn("{} not implemented", __func__);
         // empty clip
         return clip;
    virtual bool start_record() override {
        vxg::logger::warn("{} not implemented", __func__);
         return false;
    virtual void stop_record() override {
        vxg::logger::warn("{} not implemented", __func__);
};
Event stream callback class: derived from agent::media::event stream
class my_event_stream : public agent::event_stream {
    my_event_stream(std::string name) : agent::event_stream(name) {}
```

```
virtual bool start() {
    vxg::logger::warn("{} not implemented", __func__);
    return false;
}
virtual void stop() { vxg::logger::warn("{} not implemented", __func__); }
virtual bool init() {
    vxg::logger::warn("{} not implemented", __func__);
    return false;
}
virtual void finit() { vxg::logger::warn("{} not implemented", __func__); }
virtual bool set_trigger_recording(bool enabled, int pre, int post) {
    vxg::logger::warn("{} not implemented", __func__);
    return false;
}
virtual bool get_events(std::vector<proto::event_config>& configs) {
    return false;
}
virtual bool set_events(const std::vector<proto::event_config>& config) {
    return false;
}
virtual bool set_events(const std::vector<proto::event_config>& config) {
    return false;
}
```

Creating and start agent instance with all callbacks:

```
using namespace vxg::cloud::agent;
// Agent
manager::ptr agent;
// VXG Cloud token
auto access_token = proto::access_token::parse(vxg_cloud_token);
// Agent callback
callback::ptr cb = std::make_unique<my_agent_callback>();
// Media stream
std::vector<agent::media::stream::ptr> streams;
media::stream::ptr stream =
    std::make_shared<my_media_stream>(rtsp_url, "MyMediaStream");
streams.push_back(stream);
// Event stream
std::vector<agent::event_stream::ptr> event_streams;
event_stream::ptr event_stream =
    std::make_shared<my_event_stream>("MyEventStream");
event_streams.push_back(event_stream);
// Create agent
if ((agent =
         agent::manager::create(agent_config, std::move(cb), access_token,
                                streams, event_streams)) == nullptr) {
    vxg::logger::error("Failed to create agent");
    return EXIT_FAILURE;
if (!quit && !agent->start())
    quit = true;
```

3.2.3 Linking application against the VXG Agent Cloud Library

There are 3 possible ways of how to build and link your application

1. Building the application inside the VXG CLoud Agent library's Meson project, the app will be assembled during the library project compilation in this case.

You need to add a new executable target into the main meson.build file, please refer to the example app build target declaration:

```
cloud_agent_minimal = executable('cloud-agent-minimal', 'src/cloud-agent-minimal.cc',
   install : true, dependencies: dep)
```

User must declare own executable target with a list of sources and dependencies, user may need to declare own dependencies if application requires it.

This method is not recommended as it makes updating of the VXG Cloud Agent library mostly not possible or very difficult for application developer

2. Building your app using your own build system and linking against the installed library.

Running the install step from the compile section installs the binary libraries and headers into the directory you specified during the setup step, it also puts the pkg-config's .pc files into the prefix directory which could be used by your own build system.

3.2 Examples 11

3. Preferred and recommended way of application development is to hold the app as a separate Meson project and use the VXG Cloud Agent library as a Meson subproject of the application's Meson project.

Using this approach gives the most flexible and convenient workflow for updating the VXG Cloud Library, all library dependencies will be promoted to the main project and will be also accessible by the application.

How does it work

- Assuming you have a Meson build system installed
- Start a new Meson project with a following command:

 meson init -1 cpp -n your-project-name
- · As a result of this command you should have the following files tree:

```
|-- meson.build
|-- your_project_name.cpp
```

Add VXG Cloud Agent library as a Meson subproject
 All subprojects should be located in the subprojects directory so you have to create it first mkdir subprojects

Now you have 2 options depending on how you want to store the VXG Cloud Agent library sources:

- (a) If you want to store the VXG Cloud Agent library as a files tree locally.
 - Create a symlink to the library path inside the subprojects dir:

 ln -s path/to/vxgcloudagent subprojects/vxgcloudagent

Or you can just move vxgcloudagent directory inside the subprojects dir.

• Create a library's Meson wrap file inside the subprojects dir, the name of the file should be the same as symlink you created in 1.1 and the content of the file should be:

```
[wrap-file]
directory = vxgcloudagent
[provide]
vxgcloudagent = vxgcloudagent_dep
```

(b) If you want to store the library in a git repository you just need to create a wrap file with the content like below:

```
[wrap-git]
url=https://your-git-repo-url.com/path/vxgcloudagent.git
# You can specify tag, branch or commit hash as revision
revision=master
[provide]
vxgcloudagent = vxgcloudagent_dep
```

You can find the example app Meson project in the example/app directory of the VXG Cloud library sources package.

Library Compilation Guide

4.0.1 Library build process

Here is a compilation quickstart guide:

· First of all you need to have a build system and toolchain installed

· Setup the build directory

```
meson setup --prefix=path/to/install --strip -Dbuildtype=debug builddir/
# --prefix=path specifies the installation path
# --strip indicates that final binaries should be stripped
# -Dbuildtype= specifies the debug/release build type, please check the Meson docs about full list of the build types.
```

Build

```
meson compile -C builddir
# Or
ninja -C builddir
```

Install

```
meson install -C builddir
# Or
ninja -C builddir/ install
```

As a result of the install step you should have the library compiled and installed into the prefix directory you specified during the setup step.

Clean

```
ninja -C builddir clean
```

Or you can just delete the builddir, you will need to setup it again in this case.

rm -rf builddir

4.0.2 Cross-compilation

- By default Meson builds project for the host platform, but it's also possible to cross-compile the library and your application using Meson.
- Full Meson cross-compilation documentation can be found here.
- The difference between the host compilation described above and the cross-compilation is the additional --cross-file=path/to/cross-file.txt flag for the Meson Setup step, the Setup command should look like below:

```
meson setup --prefix=path/to/install --strip -Dbuildtype=debug --cross-file=path/to/cross-file.txt builddir/
```

cross-file.txt is the target platform description which in terms of Meson called a cross-file.

• cross-file example below is for the Debian provided arm-linux-gnueabihf toolchain installable using the Ubuntu's package manager command

sudo apt install g++-arm-linux-gnueabihf

• Example of the ARMv7 cross-file:

```
[host_machine]
system = 'linux'
cpu_family = 'arm'
cpu = 'armv7-a'
endian = 'little'
[built-in options]
# Example of platform specific CFLAGS and CXXFLAGS c_args = ['-mfloat-abi=hard', '-march=armv7-a+vfpv3']
cpp_args = c_args
default_library = 'static'
[properties]
# If your toolchain requires specifying the sysroot dir you can setup it like below, sysroot_dir is a constant declared in [constants] section of the cross-file
#sys_root = sysroot_dir
# Meson uses pkg-config and cmake to detect external dependencies
# Set the correct path to your cross-compilation pkgconfig directory if your app depends on some external dependencies like platform specific libs.

#pkg_config_libdir = sysroot_dir / 'usr/lib/pkgconfig/'
[constants]
cross_prefix = 'arm-linux-gnueabihf-'
#sysroot_dir = '/opt/arm-linux-gnueabihf/sysroot/'
[binaries]
c = cross_prefix + 'gcc'
cpp = cross_prefix + 'g++'
ar = cross_prefix + 'ar'
strip = cross_prefix + 'strip'
# You should specify your platform toolchain pkg-config binary here #pkgconfig = '/opt/arm-linux-gnueabihf/bin/pkg-config'
```

Deprecated List

Global vxg::logger::reset (int argc, char **argv, loglevel I, std::string syslog_ident="VXGCloudAgent → Default", std::string crash_logfile_path="", std::string logfile_path="", size_t logfile_max_size=(1024 *1024), size_t logfile_max_files=3)

Use reset(const options& opts)

Data Structure Index

7.1 Data Structures

Here are the data structures with brief descriptions:

vxg::cloud::agent::access_token
VXG Cloud access token
alter_bool
Alternative bool class Standard bool type has two states, this class adds 3rd state - undefined . 7
vxg::cloud::agent::proto::audio_caps
Audio capabilities
vxg::cloud::agent::audio_config
Audio config
vxg::cloud::agent::audio_detection_config::audio_detection_conf_caps
vxg::cloud::agent::audio_detection_config
5.6 audio_detection_config (CM) Current audio detection settings
vxg::cloud::agent::proto::audio_stream_config
Audio media stream config
vxg::media::Streamer::StreamInfo::AudioInfo
Audio stream info
vxg::cloud::agent::callback
VXG Cloud manager common callbacks class
vxg::cloud::agent::proto::stream_caps::caps_audio_object
Audio streams capabilities
vxg::cloud::agent::proto::stream_caps::caps_video_object
Video streams capabilities
vxg::cloud::cloud_storage
vxg::cloud::agent::event_manager::config
vxg::cloud::agent::synchronizer::config
vxg::cloud::agent::proto::event_caps
Events capabilies
vxg::cloud::agent::event_config
Event config
vxg::cloud::agent::event_manager
vxg::cloud::agent::event_state
vxg::cloud::agent::event_state::event_state_changed_cb
vxg::cloud::agent::event_manager::event_state_report_cb
vxg::cloud::agent::event_stream
Event stream, abstract class for event generation
vxg::cloud::agent::events_config
Events config, list of event_config objects

20 Data Structure Index

vxg::media::Streamer::ISink	. 137
vxg::media::Streamer::ISource	
ISource interface class	
vxg::cloud::timed_storage::item	. 150
vxg::logger	
Logger class, current implementation based on spdlog	. 154
vxg::cloud::agent::manager	
VXG Cloud agent manager class	. 161
vxg::cloud::utils::motion::map	. 173
vxg::media::Streamer::MediaFrame	
Media frame container	. 175
vxg::cloud::agent::proto::motion detection caps	
Motion detection capabilities camera capabilities that limit possible motion detection configurations.	a-
tion	
vxg::cloud::agent::proto::motion_detection_config	. 170
	100
Motion detection config	. 180
vxg::cloud::agent::proto::motion_region	
Motion detection related structs	
vxg::logger::options	. 183
vxg::cloud::agent::proto::osd_caps	
OSD capabilities	. 186
vxg::cloud::agent::osd_config	
OSD config	. 190
vxg::cloud::period	
vxg::cloud::agent::access_token::proxy_config	
Socks proxy settings	. 197
· · ·	. 137
vxg::cloud::agent::ptz_command	100
PTZ command	. 198
vxg::cloud::agent::ptz_config	
PTZ config	. 199
vxg::cloud::agent::ptz_preset	
PTZ preset	
$ vxg::cloud::utils::queued_async_handler < T > $. 202
vxg::media::stream_error::report	
Media stream error report simple object	. 205
vxg::media::rtmp_sink	
RTMP sink class	. 206
vxg::media::rtmp_source	
RTMP source class	210
	. 210
vxg::media::rtsp_source RTSP source class	010
	. 212
vxg::cloud::agent::media::rtsp_stream	
Implementation of the media::stream with RTSP source and NIY stubs	
vxg::cloud::agent::synchronizer::segmenter	. 219
vxg::media::ffmpeg::Sink	
Base ffmpeg sink class	. 224
vxg::media::ffmpeg::Source	
Base ffmpeg source class	. 229
vxg::media::stream	
Base media stream abstract class	. 234
vxg::cloud::agent::media::stream	
Cloud agent media stream abstract class	. 239
vxg::cloud::agent::media::stream_callbacks	. 209
	044
Cloud agent media stream callbacks abstract class	
vxg::cloud::agent::media::stream_callbacks_stub	. 247
vxg::cloud::agent::proto::stream_caps	_
Media stream capabilites	. 253

7.1 Data Structures 21

vxg::cloud::agent::proto::stream_config	
Media stream config	54
vxg::cloud::stream_storage	55
vxg::media::Streamer::StreamInfo	
Stream info description	58
vxg::cloud::agent::supported_stream_config	
Supported stream config	62
vxg::cloud::agent::supported_streams_config	
Supported streams config, list of supported_stream_config	63
vxg::cloud::agent::synchronizer::sync_request	65
vxg::cloud::agent::synchronizer	65
vxg::cloud::timed_storage	69
$vxg::cloud::timeline < T > \qquad \qquad$	72
vxg::cloud::sync::timeline	73
vxg::cloud::utils::uri	77
vxg::cloud::agent::proto::video_caps	
Video image capabilities	79
vxg::cloud::agent::proto::video_clip_info	
Video recoding(mp4 file) clip description,	83
vxg::cloud::agent::proto::video_config	
Video image config	85
vxg::cloud::agent::proto::video_stream_config	
Video stream config	90
vxg::media::Streamer::StreamInfo::VideoInfo	
Video stream info	93
vxg::cloud::agent::proto::wifi_config	
WiFi config	96
vxg::cloud::agent::proto::wifi_network	
WiFi network object	97

Data Structures

· struct access_token

VXG Cloud access token.

· struct audio_config

Audio config.

· struct audio_detection_config

5.6 audio_detection_config (CM) Current audio detection settings.

· class callback

VXG Cloud manager common callbacks class.

· struct event_config

Event config.

- · class event_manager
- · class event state
- class event_stream

Event stream, abstract class for event generation.

· struct events_config

Events config, list of event_config objects.

· class manager

VXG Cloud agent manager class.

struct osd_config

OSD config.

struct ptz_command

PTZ command.

struct ptz_config

PTZ config.

struct ptz_preset

PTZ preset.

• struct supported_stream_config

Supported stream config.

• struct supported_streams_config

Supported streams config, list of supported_stream_config.

· class synchronizer

Typedefs

- using event manager ptr = std::shared ptr< event manager >
- using event_state_ptr = std::shared_ptr< event_state >
- using synchronizer_ptr = std::shared_ptr< synchronizer >

Functions

• std::string version ()

VXG Cloud Agent library version.

9.5.1 Detailed Description

VXG Cloud Agent namespace.

9.5.2 Typedef Documentation

9.5.2.1 event_manager_ptr

```
using vxg::cloud::agent::event_manager_ptr = typedef std::shared_ptr<event_manager>
```

Definition at line 210 of file event-manager.h.

9.5.2.2 event_state_ptr

```
using vxg::cloud::agent::event_state_ptr = typedef std::shared_ptr<event_state>
```

Definition at line 200 of file event-state.h.

9.5.2.3 synchronizer_ptr

```
using vxg::cloud::agent::synchronizer_ptr = typedef std::shared_ptr<synchronizer>
```

Definition at line 803 of file timeline-synchronizer.h.

9.5.3 Function Documentation

9.5.3.1 version()

```
std::string vxg::cloud::agent::version ( )
```

VXG Cloud Agent library version.

Returns

std::string version string

9.6 vxg::cloud::agent::media Namespace Reference

Data Structures

· class rtsp_stream

Implementation of the media::stream with RTSP source and NIY stubs.

· class stream

Cloud agent media stream abstract class.

· class stream callbacks

Cloud agent media stream callbacks abstract class.

class stream_callbacks_stub

Typedefs

using stream_ptr = std::shared_ptr< stream >

9.6.1 Typedef Documentation

9.6.1.1 stream_ptr

```
using vxg::cloud::agent::media::stream_ptr = typedef std::shared_ptr<stream>
```

Definition at line 236 of file agent/stream.h.

9.7 vxg::cloud::agent::proto Namespace Reference

Data Structures

· struct audio_caps

Audio capabilities.

struct audio_stream_config

Audio media stream config.

struct event_caps

Events capabilies.

• struct motion_detection_caps

Motion detection capabilities camera capabilities that limit possible motion detection configuration.

· struct motion_detection_config

Motion detection config.

struct motion_region

Motion detection related structs.

struct osd_caps

OSD capabilities.

struct stream_caps

Media stream capabilites.

· struct stream_config

Media stream config.

struct video_caps

Video image capabilities.

struct video_clip_info

Video recoding(mp4 file) clip description,.

· struct video_config

Video image config.

· struct video_stream_config

Video stream config.

struct wifi_config

WiFi config.

· struct wifi_network

WiFi network object.

Typedefs

```
    typedef wifi_config wifi_list
wifi_config
```

Enumerations

```
enum mode { M_OFF, M_ON, M_AUTO, M_INVALID }
    Mode on/off.
enum video_format { VF_H264, VF_H265, VF_MJPEG, VF_INVALID }
    Video codec format.
enum audio format {
 AF_G711A, AF_G711U, AF_RAW, AF_ADPCM,
 AF_MP3, AF_NELLY8, AF_NELLY16, AF_NELLY,
 AF_OPUS, AF_AAC, AF_SPEEX, AF_INVALID }
    Audio codec format.
enum audio_file_format { AFF_AU_G711U, AFF_MP3, AFF_WAV_PCM, AFF_INVALID }
    Audio file format.

    enum motion sensitivity { MS REGION, MS FRAME, MS INVALID }

    Motion sensitivity.
enum motion_region_shape { MR_RECTANGLE, MR_ANY, MR_INVALID }
    Motion region shape.
enum ptz_action {
 A_LEFT, A_RIGHT, A_TOP, A_BOTTOM,
 A ZOOM IN, A ZOOM OUT, A STOP, A INVALID }
    PTZ actions.
enum ptz_preset_action {
 PA_CREATE, PA_DELETE, PA_GOTO, PA_UPDATE,
 PA_INVALID }
    PTZ preset action.
enum time_format_n { TF_12H, TF_24H, TF_INVALID }
    3.34\ get\_osd\_conf\ (SRV)\ 3.35\ osd\_conf\ (CM)\ 3.36\ set\_osd\_conf\ (SRV)
enum event_status { ES_OK, ES_ERROR, ES_INVALID }
    Event status.
enum event type {
 ET_MOTION, ET_SOUND, ET_NET, ET_RECORD,
 ET_MEMORYCARD, ET_WIFI, ET_CUSTOM, ET_INVALID }
    Types of events.
enum memorycard status {
 MCS NONE, MCS NORMAL, MCS NEED FORMAT, MCS FORMATTING,
 MCS_INITIALIZATION, MCS_INVALID }
    Memory card status.
enum wifi encryption {
 WFE OPEN, WFE WEP, WFE WPA, WFE WPA2,
 WFE_WPA_ENTERPRISE, WFE_WPA2_ENTERPRISE, WFE_INVALID }
    WiFi encryption type.
enum wifi network state {
 WNS UNKNOWN, WNS INITIALIZE 0, WNS INITIALIZE 1, WNS TRY CONNECT,
 WNS RECEIVING IP, WNS CONNECTED, WNS INVALID }
```

WiFi connection state.

Functions

• std::string name () const

9.7.1 Typedef Documentation

9.7.1.1 wifi_list

typedef wifi_config vxg::cloud::agent::proto::wifi_list

wifi_config

Definition at line 594 of file config.h.

9.7.2 Enumeration Type Documentation

9.7.2.1 audio_file_format

enum vxg::cloud::agent::proto::audio_file_format

Audio file format.

Enumerator

AFF_AU_G711U	AU file format, encoded in mu-law and sampled with 8 or 16 kHz;.
AFF_MP3	MP3 file format, in mono or stereo with bitrate of 64 kbps to 320 kbps and sample rate of 8 to 48 kHz.
AFF_WAV_PCM	WAV file format, encoded in PCM audio that depends on what the product supports. It may support encoded as 8 or 16-bit mono or stereo and sample rate of 8 to 48 kHz;
AFF_INVALID	Invalid value.

Definition at line 147 of file caps.h.

9.7.2.2 audio_format

enum vxg::cloud::agent::proto::audio_format

Audio codec format.

Enumerator

Definition at line 106 of file caps.h.

9.7.2.3 event_status

enum vxg::cloud::agent::proto::event_status

Event status.

Enumerator

ES_OK	Ok.
ES_ERROR	Error.
ES_INVALID	Default status, invalid.

Definition at line 378 of file config.h.

9.7.2.4 event_type

enum vxg::cloud::agent::proto::event_type

Types of events.

Enumerator

ET_MOTION	"motion" for motion detection events
ET_SOUND	"sound" for audio detection
ET_NET	"net" for the camera network status change
ET_RECORD	"record" CM informs server about necessity of changing of recording state
ET_MEMORYCARD	"memorycard" camera's memory-card status change
ET_WIFI	"wifi" status of camera's currently used Wi-Fi
ET_CUSTOM	Custom event.
Generated by ET INVALID	Invalid event type.

Definition at line 401 of file config.h.

9.7.2.5 memorycard_status

enum vxg::cloud::agent::proto::memorycard_status

Memory card status.

Enumerator

MCS_NONE	No memorycard.
MCS_NORMAL	Memorycard is OK.
MCS_NEED_FORMAT	Need formatting.
MCS_FORMATTING	Formatting ongoing.
MCS_INITIALIZATION	Initialization, not mounted yet for example.
MCS_INVALID	Invalid value.

Definition at line 481 of file config.h.

9.7.2.6 mode

enum vxg::cloud::agent::proto::mode

Mode on/off.

Enumerator

M_OFF	
M_ON	
M_AUTO	
M_INVALID	

Definition at line 30 of file caps.h.

9.7.2.7 motion_region_shape

enum vxg::cloud::agent::proto::motion_region_shape

Motion region shape.

Enumerator

MR_RECTANGLE	Rectangle.
MR_ANY	Any shape.
MR_INVALID	Invalid.

Definition at line 313 of file caps.h.

9.7.2.8 motion_sensitivity

enum vxg::cloud::agent::proto::motion_sensitivity

Motion sensitivity.

Enumerator

MS_REGION	Indicates if sensitivity can be set for region.
MS_FRAME	Indicates if sensitivity can be only for the full frame.
MS_INVALID	Invalid value.

Definition at line 291 of file caps.h.

9.7.2.9 ptz_action

enum vxg::cloud::agent::proto::ptz_action

PTZ actions.

Enumerator

A_LEFT	Go left.
A_RIGHT	Go right.
A_TOP	Go tip.
A_BOTTOM	Go bottom.
A_ZOOM_IN	Zoom in.
A_ZOOM_OUT	Zoom out.
A_STOP	Stop current action.
A_INVALID	Invalid value.

Definition at line 533 of file caps.h.

9.7.2.10 ptz_preset_action

enum vxg::cloud::agent::proto::ptz_preset_action

PTZ preset action.

Enumerator

PA_CREATE	
PA_DELETE	
PA_GOTO	
PA_UPDATE	
PA_INVALID	

Definition at line 569 of file caps.h.

9.7.2.11 time_format_n

enum vxg::cloud::agent::proto::time_format_n

3.34 get_osd_conf (SRV) 3.35 osd_conf (CM) 3.36 set_osd_conf (SRV)

Time format

Enumerator

TF_12H	12 hours
TF_24H	24 hours
TF_INVALID	Invalid value.

Definition at line 598 of file caps.h.

9.7.2.12 video_format

enum vxg::cloud::agent::proto::video_format

Video codec format.

Enumerator

VF_H264	H264 (AVC)
VF_H265	H265 (HEVC)
VF_MJPEG	Motion JPEG.
VF_INVALID	Invalid value.

Definition at line 81 of file caps.h.

9.7.2.13 wifi_encryption

enum vxg::cloud::agent::proto::wifi_encryption

WiFi encryption type.

Enumerator

WFE_OPEN	No encryption.
WFE_WEP	WEP.
WFE_WPA	WPA-PSK.
WFE_WPA2	WPA2-PSK.
WFE_WPA_ENTERPRISE	WPA-Enterprise.
WFE_WPA2_ENTERPRISE	WPA2-Enterprise.
WFE_INVALID	Default, invalid value.

Definition at line 517 of file config.h.

9.7.2.14 wifi_network_state

enum vxg::cloud::agent::proto::wifi_network_state

WiFi connection state.

Enumerator

WNS_UNKNOWN	
WNS_INITIALIZE_0	
WNS_INITIALIZE_1	
WNS_TRY_CONNECT	
WNS_RECEIVING_IP	
WNS_CONNECTED	
WNS_INVALID	Invalid value.

Definition at line 597 of file config.h.

10.2 alter bool Struct Reference

alternative bool class Standard bool type has two states, this class adds 3rd state - undefined.

#include <agent-proto/command/unset-helper.h>

Public Types

enum n_alter_bool { B_FALSE, B_TRUE, B_INVALID }
 Internal boolean values.

Public Member Functions

- alter bool (const n alter bool &v)
- alter_bool (const bool &v)
- alter_bool operator= (const bool &b)
- operator bool () const

Data Fields

• n_alter_bool val

Friends

- void from_json (const nlohmann::json &j, alter_bool &c)
- void to_json (nlohmann::json &j, const alter_bool &c)

10.2.1 Detailed Description

alternative bool class Standard bool type has two states, this class adds 3rd state - undefined.

This class used for json boolean => C++ bool type reflection. The B_INVALID value of the C++ data indicates that source json has no such field.

Definition at line 168 of file unset-helper.h.

10.2.2 Member Enumeration Documentation

10.2.2.1 n_alter_bool

enum alter_bool::n_alter_bool

Internal boolean values.

Enumerator

B_FALSE	false
B_TRUE	true
B_INVALID	Undefined, i.e. if the object was constructed from the json object this value means that original json had no such field.

Definition at line 170 of file unset-helper.h.

10.2.3 Constructor & Destructor Documentation

10.2.3.1 alter_bool() [1/2]

```
alter_bool::alter_bool (  {\tt const\ n\_alter\_bool\ \&\ v\ )} \quad [inline]
```

Definition at line 180 of file unset-helper.h.

10.2.3.2 alter_bool() [2/2]

```
alter_bool::alter_bool (
    const bool & v ) [inline]
```

Definition at line 182 of file unset-helper.h.

10.2.4 Member Function Documentation

10.2.4.1 operator bool()

```
alter_bool::operator bool ( ) const [inline]
```

Definition at line 196 of file unset-helper.h.

10.2.4.2 operator=()

Definition at line 189 of file unset-helper.h.

10.2.5 Friends And Related Function Documentation

10.2.5.1 from_json

Definition at line 202 of file unset-helper.h.

10.2.5.2 to_json

Definition at line 209 of file unset-helper.h.

10.2.6 Field Documentation

10.2.6.1 val

```
n_alter_bool alter_bool::val
```

Definition at line 216 of file unset-helper.h.

The documentation for this struct was generated from the following file:

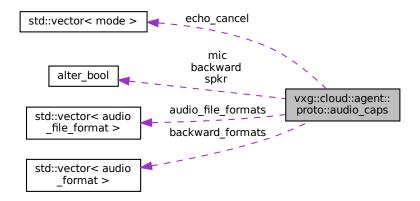

· unset-helper.h

10.3 vxg::cloud::agent::proto::audio_caps Struct Reference

Audio capabilities.

#include <agent-proto/objects/caps.h>

Collaboration diagram for vxg::cloud::agent::proto::audio caps:

Data Fields

· alter bool mic

mic: bool, microphone is supported

· alter_bool spkr

spkr: bool, speaker is supported

std::vector < mode > echo_cancel

echo_cancel: list of string, echo cancellation modes, empty or absent means not supported

alter_bool backward

backward: bool, backward audio supported.

• std::vector< audio_format > backward_formats

 $backward_formats: \textit{list of audio_format, list of supported backward formats.}$

 $\bullet \quad \textbf{std::} \textbf{vector} < \texttt{audio_file_format} > \texttt{audio_file_formats}$

audio_file_formats: list of string, list of supported formats of audio files.

10.3.1 Detailed Description

Audio capabilities.

Definition at line 490 of file caps.h.

10.3.2 Field Documentation

10.3.2.1 audio_file_formats

std::vector<audio_file_format> vxg::cloud::agent::proto::audio_caps::audio_file_formats

audio file formats: list of string, list of supported formats of audio files.

Definition at line 513 of file caps.h.

10.3.2.2 backward

alter_bool vxg::cloud::agent::proto::audio_caps::backward

backward: bool, backward audio supported.

Obsolete. Server will ignore it when backward_formats exists. If true and backward_formats is missed, server will interpret supported formats list as ["UNKNOWN"]

Definition at line 503 of file caps.h.

10.3.2.3 backward_formats

std::vector<audio_format> vxg::cloud::agent::proto::audio_caps::backward_formats

backward_formats: list of audio_format, list of supported backward formats.

Supported values: ["RAW", "ADPCM", "MP3", "NELLY8", "NELLY16", "NELLY16", "G711A", "G711U", "AAC", "SPE ← EX", "UNKNOWN"]. Empty list or missing parameter – camera doesn't support back audio channel.

Definition at line 509 of file caps.h.

10.3.2.4 echo_cancel

std::vector<mode> vxg::cloud::agent::proto::audio_caps::echo_cancel

echo_cancel: list of string, echo cancellation modes, empty or absent means not supported

Definition at line 498 of file caps.h.

10.3.2.5 mic

alter_bool vxg::cloud::agent::proto::audio_caps::mic

mic: bool, microphone is supported

Definition at line 492 of file caps.h.

10.3.2.6 spkr

alter_bool vxg::cloud::agent::proto::audio_caps::spkr

spkr: bool, speaker is supported

Definition at line 495 of file caps.h.

The documentation for this struct was generated from the following file:

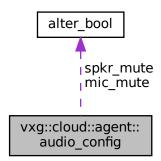

· caps.h

10.4 vxg::cloud::agent::audio_config Struct Reference

Audio config.

#include <agent-proto/objects/config.h>

10.9 vxg::cloud::agent::callback Class Reference

VXG Cloud manager common callbacks class.

```
#include <agent/callback.h>
```

Public Types

typedef std::unique_ptr < callback > ptr
 std::unique_ptr to callback

Public Member Functions

virtual void on_bye (proto::command::bye_reason reason)=0
 VXG Cloud Bye command callback.

virtual void on_registered (const std::string &sid)

Registration on the Cloud has passed callback.

virtual bool on_raw_msg (std::string client_id, std::string &data)

raw message callback

virtual bool on_get_log (std::string &log_data)

Get logging data callback.

• virtual bool on_start_backward_audio (std::string url)

Start backward audio stream.

virtual bool on_stop_backward_audio (std::string url)

Stop backward audio.

virtual bool on_get_cam_video_config (proto::video_config &config)

Get video image config.

• virtual bool on_set_cam_video_config (const proto::video_config &config)

Set video input config.

virtual bool on get cam audio config (proto::audio config &config)

Get audio input configuration.

virtual bool on_set_cam_audio_config (const proto::audio_config &config)

Set audio input/output config.

virtual bool on get ptz config (proto::ptz config &config)

Get PTZ config.

virtual bool on_cam_ptz (proto::ptz_command &command)

PTZ command.

virtual bool on_cam_ptz_preset (proto::ptz_preset &preset_op)

PTZ preset command.

virtual bool on_get_osd_config (proto::osd_config &config)

Get OSD config.

virtual bool on_set_osd_config (const proto::osd_config &config)

Set OSD config.

virtual bool on_get_wifi_config (proto::wifi_config &config)

Get WiFi config.

virtual bool on_set_wifi_config (const proto::wifi_network &config)

Set WiFi config.

virtual bool on_get_motion_detection_config (proto::motion_detection_config &config)

Get motion detection configuration.

virtual bool on_set_motion_detection_config (const proto::motion_detection_config &config)

Set motion detection config.

virtual bool on_get_timezone (std::string &timezone)

Get device timezone in IANA format.

virtual bool on set timezone (std::string timezone)

Set device timezone in IANA format.

virtual bool on_get_memorycard_info (proto::event_object::memorycard_info_object &info)

Get memory card information, If this callback returned false or if info status not equal to proto::MCS_NORMAL, the recording will not be started, i.e.

virtual bool on_cam_upgrade_firmware (const std::string &firmware)

Firmware upgrade.

• virtual bool on_audio_file_play (const std::string audio_file_data, const std::string filename)

Audio file play.

- virtual bool on_trigger_event (proto::event_object &event)
- virtual bool on_set_audio_detection (const proto::audio_detection_config &conf)
- virtual bool on_get_audio_detection (proto::audio_detection_config &conf)

10.9.1 Detailed Description

VXG Cloud manager common callbacks class.

Definition at line 17 of file callback.h.

10.9.2 Member Typedef Documentation

```
10.9.2.1 ptr
```

```
typedef std::unique_ptr<callback> vxg::cloud::agent::callback::ptr
```

std::unique_ptr to callback

Definition at line 20 of file callback.h.

10.9.3 Member Function Documentation

10.9.3.1 on_audio_file_play()

Audio file play.

Parameters

in	audio_file	Audio file binary data.
in	audio_file_format	Audio file data format.

Returns

true if firmware upgrade was successful. false if firmware upgrade failed.

Definition at line 309 of file callback.h.

10.9.3.2 on_bye()

VXG Cloud Bye command callback.

Parameters

```
reason bye reason
```

10.9.3.3 on_cam_ptz()

PTZ command.

Parameters

nand

Returns

true success

false PTZ command failure

Definition at line 163 of file callback.h.

10.9.3.4 on_cam_ptz_preset()

PTZ preset command.

Parameters

in,out	preset_op	ptz preset operation, if operation is proto::PA_CREATE the callee should fill the token.
--------	-----------	--

Returns

true PTZ preset operation success false PTZ preset operation failure

Definition at line 175 of file callback.h.

10.9.3.5 on_cam_upgrade_firmware()

Firmware upgrade.

Parameters

in	firmware	Firmware binary data.

Returns

 $true\ if\ firmware\ upgrade\ was\ successful.$

false if firmware upgrade failed.

Definition at line 299 of file callback.h.

10.9.3.6 on_get_audio_detection()

Definition at line 326 of file callback.h.

10.9.3.7 on_get_cam_audio_config()

Get audio input configuration.

Parameters

out	config	audio input config
-----	--------	--------------------

Returns

true get audio input configuration success false get audio input configuration failed

Definition at line 127 of file callback.h.

10.9.3.8 on_get_cam_video_config()

Get video image config.

Parameters

0	ut	config	video image config

Returns

true if get image config success false get image config failed

Definition at line 103 of file callback.h.

10.9.3.9 on_get_log()

Get logging data callback.

Cloud API provides the way to request log data using Cloud API

Parameters

```
log_data log data
```

Returns

true on success false on failure

Definition at line 65 of file callback.h.

10.9.3.10 on_get_memorycard_info()

Get memory card information, If this callback returned false or if info status not equal to proto::MCS_NORMAL, the recording will not be started, i.e.

no agent::media::stream::record_start() will be called.

Parameters

```
out info memorycard info
```

Returns

true if info is valid false if info is not valid

Definition at line 289 of file callback.h.

10.9.3.11 on_get_motion_detection_config()

Get motion detection configuration.

Parameters

out	config	Motion detection config if return value is true
-----	--------	---

Returns

true if config is valid false if failed to get motion detection config

Definition at line 236 of file callback.h.

10.9.3.12 on_get_osd_config()

Get OSD config.

Parameters

```
out config OSD config
```

Returns

true OSD config get success, config is valid false OSD config get failure, config should not be used

Definition at line 187 of file callback.h.

10.9.3.13 on_get_ptz_config()

Get PTZ config.

Parameters

out <i>config</i>	ptz config
-------------------	------------

Returns

true success

false Get PTZ config failed

Definition at line 151 of file callback.h.

10.9.3.14 on_get_timezone()

Get device timezone in IANA format.

Parameters

out <i>timezone</i>	name in IANA format
---------------------	---------------------

Returns

true if timezone is valid
false if timezone is not valid

Definition at line 262 of file callback.h.

10.9.3.15 on_get_wifi_config()

Get WiFi config.

Parameters

out	config	WiFi config

Returns

true success

false failed

Definition at line 211 of file callback.h.

10.9.3.16 on_raw_msg()

raw message callback

Parameters

in	client←	unique id of the client, every raw messages session uses the same unique client_id	
	_id		
in,out	data	raw message payload from client, output value will be sent to the client if return value	
		is true	

Returns

true raw message handled and reply in the output data argument should be sent to the client as reply false raw message handling failure, data output argument should not be sent to client

Definition at line 53 of file callback.h.

10.9.3.17 on_registered()

Registration on the Cloud has passed callback.

Parameters

sid Cloud connection session id. Must be saved and provided via the agent::config.cm_register_sid before the next vxg::cloud::agent::manager::start(), otherwise the Cloud will block connection with CONN_CONFLICT for some period of time.

Definition at line 37 of file callback.h.

10.9.3.18 on_set_audio_detection()

Definition at line 320 of file callback.h.

10.9.3.19 on_set_cam_audio_config()

Set audio input/output config.

Parameters

config audio	input/output config
--------------	---------------------

Returns

true applied

false failed to set config

Definition at line 139 of file callback.h.

10.9.3.20 on_set_cam_video_config()

Set video input config.

Parameters

onfig video input config

Returns

true Video image input config was successfully set false Failed to set video input image config

Definition at line 115 of file callback.h.

10.9.3.21 on_set_motion_detection_config()

Set motion detection config.

Parameters

in config motion detection	on config
----------------------------	-----------

Returns

```
true if config was successfully set false if failed to set config
```

Definition at line 249 of file callback.h.

10.9.3.22 on_set_osd_config()

Set OSD config.

Parameters

in	config	OSD config
----	--------	------------

Returns

true OSD config was successfully set false failed to set OSD config

Definition at line 199 of file callback.h.

10.9.3.23 on_set_timezone()

Set device timezone in IANA format.

Parameters

in	timezone	timezone in IANA format		

Returns

true if timezone was successfully set false if timezone was not set

Definition at line 274 of file callback.h.

10.9.3.24 on_set_wifi_config()

Set WiFi config.

Parameters

in	config	WiFi configuration
----	--------	--------------------

Returns

```
true if config is valid false if config is invalid
```

Definition at line 223 of file callback.h.

10.9.3.25 on_start_backward_audio()

Start backward audio stream.

Parameters

url rtmp url for backward channel, device supports backward audio if on_get_cam_audio_config() set proto::audio_config.caps spkr to true

Implementation should start rtmp client by its own, final implementation is also responsible for the demuxing, decoding and rendering of the audio stream.

Returns

true on success false on failure

Definition at line 81 of file callback.h.

10.9.3.26 on_stop_backward_audio()

Stop backward audio.

Parameters

url backward audio url which was used to start the backward channel

Definition at line 92 of file callback.h.

10.9.3.27 on_trigger_event()

Definition at line 315 of file callback.h.

The documentation for this class was generated from the following file:

10.11 vxg::cloud::agent::proto::stream_caps::caps_video_object Struct Reference

Video streams capabilities.

#include <agent-proto/objects/caps.h>

Collaboration diagram for vxg::cloud::agent::proto::stream_caps::caps_video_object:

Data Fields

std::vector< std::string > streams

Mandatory: list of strings, video ES that are covered by this capability config.

std::vector < video_format > formats

Mandatory: list of string, supported video formats; currently only "H.264" is supported.

std::vector< std::pair< video_format, std::string > > profiles

Optional: list of pairs [string (format), string (profile)], list of profiles for formats (when they have).

• std::vector< std::pair< int, int > > resolutions

Mandatory: list of pairs [int (horz), int (vert)], - supported video resolutions.

std::vector< double > fps

Mandatory: list of float, supported framerates.

bool vbr

Mandatory: VBR is supported.

std::pair< int, int > quality

Optional: [min:int, max:int], range of quality for VBR.

std::vector< int > gop

Mandatory: gop: [min:int, max:int, step:int], range of gop sizes.

std::vector< int > brt

Mandatory: [min:int, max:int, step:int], range of bitrates, kbps.

std::vector< int > vbr_brt

Optional: [min:int, max:int, step:int], range of bitrates, kbps.

· bool smoothing

Optional: True when stream smoothing can be controlled.

10.11.1 Detailed Description

Video streams capabilities.

Definition at line 177 of file caps.h.

10.11.2 Field Documentation

10.11.2.1 brt

```
std::vector<int> vxg::cloud::agent::proto::stream_caps::caps_video_object::brt
```

Mandatory: [min:int, max:int, step:int], range of bitrates, kbps.

Definition at line 219 of file caps.h.

10.11.2.2 formats

```
std::vector<video_format> vxg::cloud::agent::proto::stream_caps::caps_video_object::formats
```

Mandatory: list of string, supported video formats; currently only "H.264" is supported.

Definition at line 185 of file caps.h.

10.11.2.3 fps

```
std::vector<double> vxg::cloud::agent::proto::stream_caps::caps_video_object::fps
```

Mandatory: list of float, supported framerates.

Definition at line 203 of file caps.h.

10.11.2.4 gop

```
std::vector<int> vxg::cloud::agent::proto::stream_caps::caps_video_object::gop
```

Mandatory: gop: [min:int, max:int, step:int], range of gop sizes.

Definition at line 215 of file caps.h.

10.11.2.5 profiles

```
std::vector< std::pair<video_format, std::string> > vxg::cloud::agent::proto::stream_caps←
::caps_video_object::profiles
```

Optional: list of pairs [string (format), string (profile)], list of profiles for formats (when they have).

Empty list means - color selection is not supported. "format" - one of listed in "formats" names. "profile"

• name of profile. Example: [["H.264", "Baseline"], ["H.264", "Main"], ["H.264", "High"]]

Definition at line 194 of file caps.h.

10.11.2.6 quality

```
std::pair<int, int> vxg::cloud::agent::proto::stream_caps::caps_video_object::quality
```

Optional: [min:int, max:int], range of quality for VBR.

Definition at line 211 of file caps.h.

10.11.2.7 resolutions

std::vector< std::pair<int, int> > vxg::cloud::agent::proto::stream_caps::caps_video_←
object::resolutions

Mandatory: list of pairs [int (horz), int (vert)], - supported video resolutions.

Definition at line 199 of file caps.h.

10.11.2.8 smoothing

bool vxg::cloud::agent::proto::stream_caps::caps_video_object::smoothing

Optional: True when stream smoothing can be controlled.

Definition at line 227 of file caps.h.

10.11.2.9 streams

```
std::vector< std::string> vxg::cloud::agent::proto::stream_caps::caps_video_object::streams
```

Mandatory: list of strings, video ES that are covered by this capability config.

Definition at line 180 of file caps.h.

10.11.2.10 vbr

bool vxg::cloud::agent::proto::stream_caps::caps_video_object::vbr

Mandatory: VBR is supported.

Definition at line 207 of file caps.h.

10.11.2.11 vbr_brt

```
std::vector<int> vxg::cloud::agent::proto::stream_caps::caps_video_object::vbr_brt
```

Optional: [min:int, max:int, step:int], range of bitrates, kbps.

Definition at line 223 of file caps.h.

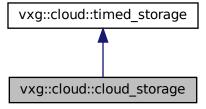

The documentation for this struct was generated from the following file:

caps.h

The documentation for this class was generated from the following file:

· timeline.h

10.13 vxg::cloud::agent::event_manager::config Struct Reference

```
#include <agent/event-manager.h>
```

Data Fields

bool attach_qos_report_to_motion

Attach qos report as motion event's meta.

bool send_qos_report_as_separate_event

Periodically send qos-report event instead of attaching qos to motion event.

• size_t send_qos_report_period_sec

Period between the qos-report events in seconds.

· bool stateful_event_continuation_kick_snapshot

Attach snapshot to event's state emulation dummy event.

10.13.1 Detailed Description

Definition at line 15 of file event-manager.h.

10.13.2 Field Documentation

10.13.2.1 attach_qos_report_to_motion

bool vxg::cloud::agent::event_manager::config::attach_qos_report_to_motion

Attach qos report as motion event's meta.

Definition at line 17 of file event-manager.h.

10.13.2.2 send_qos_report_as_separate_event

bool vxg::cloud::agent::event_manager::config::send_qos_report_as_separate_event

Periodically send qos-report event instead of attaching qos to motion event.

Definition at line 20 of file event-manager.h.

10.13.2.3 send gos report period sec

size_t vxg::cloud::agent::event_manager::config::send_qos_report_period_sec

Period between the qos-report events in seconds.

Definition at line 22 of file event-manager.h.

10.13.2.4 stateful_event_continuation_kick_snapshot

bool vxg::cloud::agent::event_manager::config::stateful_event_continuation_kick_snapshot

Attach snapshot to event's state emulation dummy event.

Stateful events emulation kicks Cloud with event of same type every 10 seconds during stateful event state is active. This flag enables snapshots for such events. Snapshot will be attached only if original event has snapshot flag enabled in its caps and settings.

Definition at line 29 of file event-manager.h.

10.15 vxg::cloud::agent::proto::event caps Struct Reference

Events capabilies.

#include <agent-proto/objects/caps.h>

Collaboration diagram for vxg::cloud::agent::proto::event_caps:

Data Fields

· bool stream

stream: bool, event can generate stream start

· bool snapshot

snapshot: bool, event is sent with snapshot

· bool periodic

periodic: optional bool, the event is a periodic event (camera generates and processes it using specified time interval)

· bool trigger

trigger: optional bool, the event can be triggered externally, using 6.7

- bool stateful
- · bool state_emulation
- std::chrono::seconds state_emulation_report_delay
- · bool internal hidden

Library internal hidden event, not reported to the Cloud.

10.15.1 Detailed Description

Events capabilies.

Definition at line 438 of file caps.h.

10.15.2 Field Documentation

10.15.2.1 internal_hidden

bool vxg::cloud::agent::proto::event_caps::internal_hidden

Library internal hidden event, not reported to the Cloud.

Definition at line 475 of file caps.h.

10.15.2.2 periodic

bool vxg::cloud::agent::proto::event_caps::periodic

periodic: optional bool, the event is a periodic event (camera generates and processes it using specified time interval)

Definition at line 447 of file caps.h.

10.15.2.3 snapshot

bool vxg::cloud::agent::proto::event_caps::snapshot

snapshot: bool, event is sent with snapshot

Definition at line 443 of file caps.h.

10.15.2.4 state_emulation

bool vxg::cloud::agent::proto::event_caps::state_emulation

Definition at line 471 of file caps.h.

10.15.2.5 state_emulation_report_delay

 $\textbf{std}:: \textbf{chrono}:: \textbf{seconds} \text{ vxg}:: \texttt{cloud}:: \texttt{agent}:: \texttt{proto}:: \texttt{event_caps}:: \texttt{state_emulation_report_delay}$

Definition at line 472 of file caps.h.

10.15.2.6 stateful

bool vxg::cloud::agent::proto::event_caps::stateful

Definition at line 469 of file caps.h.

10.15.2.7 stream

bool vxg::cloud::agent::proto::event_caps::stream

stream: bool, event can generate stream start

Definition at line 440 of file caps.h.

10.15.2.8 trigger

bool vxg::cloud::agent::proto::event_caps::trigger

trigger: optional bool, the event can be triggered externally, using 6.7

Definition at line 450 of file caps.h.

Event config.

#include <agent-proto/objects/config.h>

 $Collaboration\ diagram\ for\ vxg::cloud::agent::event_config:$

Public Member Functions

- bool name_eq (const event_config &r) const
 - Is-equal predicate based on event's name only.
- bool caps_eq (const event_config &r) const

Is-equal predicate based on event's caps.

• std::string name () const

Data Fields

event_type event

event: string, event name, see 6.1 Events naming for details

std::string custom_event_name

Custom event name, used if event set to event_type::ET_CUSTOM.

· bool active

active: bool, event is active; if not set, corresponding events will not be sent

· bool stream

stream: bool, start stream when event happens

bool snapshot

snapshot: bool, generate snapshot when event happens

int period

period: optional int, an interval between periodic events, seconds

· event_caps caps

Event capabilities.

10.16.1 Detailed Description

Event config.

Definition at line 894 of file config.h.

10.16.2 Member Function Documentation

10.16.2.1 caps eq()

Is-equal predicate based on event's caps.

Parameters

Returns

true Compared configs have equal caps.

false Compared configs have non-equal caps.

Definition at line 934 of file config.h.

10.16.2.2 name()

```
std::string vxg::cloud::agent::event_config::name ( ) const [inline]
```

Definition at line 938 of file config.h.

10.16.2.3 name_eq()

Is-equal predicate based on event's name only.

Parameters

Returns

true Compared configs are for the event with equal names.

false Compared configs are for events with non-equal names.

Definition at line 925 of file config.h.

10.16.3 Field Documentation

10.16.3.1 active

```
bool vxg::cloud::agent::event_config::active
```

active: bool, event is active; if not set, corresponding events will not be sent

Definition at line 903 of file config.h.

10.21 vxg::cloud::agent::event stream Class Reference

Event stream, abstract class for event generation.

```
#include <agent/event-stream.h>
```

Public Types

typedef std::shared_ptr< event_stream > ptr
 std::shared_ptr to event_stream

Public Member Functions

event_stream (std::string name)

Construct a new event stream object.

- virtual ∼event stream ()
- bool notify (proto::event_object event)

Callback should be called to notify event.

• virtual bool start ()=0

Start events generation, called by internal code when the events generation requested by the VXG Cloud.

virtual void stop ()=0

Stop events generation.

virtual bool get_events (std::vector < proto::event_config > &configs)=0

Get the events configs list This method should update config object and add all configurations for the events provided by this event stream.

virtual bool set_events (const std::vector< proto::event_config > &config)=0

Set the events configuration.

virtual bool trigger_event (proto::event_object &event)

Trigger event provided by event_stream If get_events() returned event config with proto::event_config.caps.trigger == true and this event was triggered via the Cloud API this method will be called.

• virtual bool set_trigger_recording (bool enabled, int pre, int post)=0

Turn on/off the event_stream triggered recording and pre/post recording time.

- virtual bool init ()=0
- virtual void finit ()=0

10.21.1 Detailed Description

Event stream, abstract class for event generation.

10.21.3 Constructor & Destructor Documentation

10.21.3.1 event_stream()

Construct a new event stream object.

Parameters

in	name	Event stream name, unique name for event stream
----	------	---

Definition at line 30 of file event-stream.h.

10.21.3.2 ~event_stream()

```
virtual vxg::cloud::agent::event_stream::~event_stream ( ) [inline], [virtual]
```

Definition at line 32 of file event-stream.h.

10.21.4 Member Function Documentation

10.21.4.1 finit()

```
virtual void vxg::cloud::agent::event_stream::finit ( ) [pure virtual]
```

10.21.4.2 get_events()

Get the events configs list This method should update config object and add all configurations for the events provided by this event stream.

config may already include event configs reported by this get_event(), hence the implementation should consider this and do not include its event configs more than one time.

Parameters

out	configs	Events configurations.
-----	---------	------------------------

Returns

true configs is valid.

false configs is invalid, should not be applied.

Note

This method MUST always return the configs with the same caps, otherwise the new config will not be applied by the library.

10.21.4.3 init()

```
virtual bool vxg::cloud::agent::event_stream::init ( ) [pure virtual]
```

10.21.4.4 notify()

Callback should be called to notify event.

Parameters

in	event	Event object
----	-------	--------------

Returns

true Event successfully notified false Notification failed

Definition at line 45 of file event-stream.h.

10.21.4.5 set_events()

Set the events configuration.

Parameters

config Events configurations list which includes all events reported by the system and other event streams, implementation should find own event configurations and apply them.

Returns

true config applied.
false config not applied.

10.21.4.6 set trigger recording()

Turn on/off the event_stream triggered recording and pre/post recording time.

Triggered recording means that event generated by this event_stream should start recording. Final recorded file should have duration of pre time + duration of the even + post time.

Note

Trigger driven recording can be used if platform supports such type of recording, implementation of such type of recording should include specific agent::media::stream records exporting mechanism which handles two consecutive events pre/post time intersections.

Parameters

in	enabled	true if event stream should trigger the recording. Implementation may ignore this if not trigger driven record method is used.
in	pre	Pre recording time in milliseconds.
in	post	Post recording time in milliseconds.

Returns

true

false

10.21.4.7 start()

```
virtual bool vxg::cloud::agent::event_stream::start ( ) [pure virtual]
```

Start events generation, called by internal code when the events generation requested by the VXG Cloud.

Event stream MUST immediately notify states of all stateful events after the start() was invoked.

Returns

true Events generation started false Failed to start events generation

10.21.4.8 stop()

```
virtual void vxg::cloud::agent::event_stream::stop ( ) [pure virtual]
```

Stop events generation.

10.21.4.9 trigger_event()

Trigger event provided by event_stream If get_events() returned event config with proto::event_config.caps.trigger == true and this event was triggered via the Cloud API this method will be called.

The logic of this method should be the same as for vxg::cloud::agent::callback::on_trigger_event().

See also

vxg::cloud::agent::callback::on_trigger_event()

Parameters

event

Returns

true

false

Definition at line 102 of file event-stream.h.

The documentation for this class was generated from the following file:

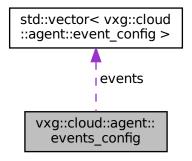

• event-stream.h

10.22 vxg::cloud::agent::events_config Struct Reference

Events config, list of event_config objects.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::events_config:

Public Member Functions

bool get_event_config (const event_object &event, event_config &result)
 Finds event which corresponds to event_config arg in the events_config structure.

Data Fields

· bool enabled

enabled: bool, indicates global events and event-driven streaming enabling flag

std::vector< event_config > events

events: list of event_config struct

10.22.1 Detailed Description

Events config, list of event_config objects.

Definition at line 983 of file config.h.

10.22.2 Member Function Documentation

10.22.2.1 get_event_config()

Finds event which corresponds to event_config arg in the events_config structure.

Parameters

in	event	- event_object, event_object.event used to find the event_config
out	result	- if event_config found it will be storred here

Returns

true event found

false event not found

Definition at line 1000 of file config.h.

10.22.3 Field Documentation

10.22.3.1 enabled

bool vxg::cloud::agent::events_config::enabled

enabled: bool, indicates global events and event-driven streaming enabling flag

Definition at line 986 of file config.h.

10.22.3.2 events

std::vector<event_config> vxg::cloud::agent::events_config::events

events: list of event_config struct

Definition at line 989 of file config.h.

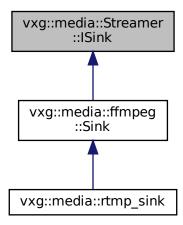

The documentation for this struct was generated from the following file:

config.h

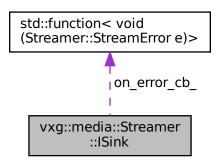

10.23 vxg::media::Streamer::ISink Class Reference

#include <streamer/base_streamer.h>

Inheritance diagram for vxg::media::Streamer::ISink:

Collaboration diagram for vxg::media::Streamer::ISink:

Public Types

- $\bullet \ \, \text{typedef} \ \, \textbf{std::shared_ptr} < \, \text{ISink} > \text{ptr} \\$
 - std::shared_ptr alias
- typedef std::unique_ptr< ISink > PtrU

std::unique_ptr alias

Public Member Functions

• ISink (uint8_t prio=SINK_THREAD_PRIO)

Construct a new ISink object.

- virtual ~ISink ()
- virtual bool init (std::string url="")=0

Init sink.

• virtual bool finit ()=0

Deinit sink.

virtual bool process (std::shared_ptr< MediaFrame > frame)=0

Process next media frame.

• virtual bool droppable ()=0

If sink of with dropping its media frames.

virtual bool negotiate (std::vector < Streamer::StreamInfo > info)

Negotiation callback, this method called with collected from the ISource::negotiate media stream description.

virtual void error (StreamError error)

Media processing error callback, called when ISink::process returned false or linked source's ISource::pullFrame returned false, or when ISource::error was called.

• virtual std::string name ()=0

Sink name.

virtual cloud::duration duration ()

Processed stream duration.

- void set eos cb (std::function < void(cloud::duration) > eos cb)
- void set eos (bool eos)
- void set_error_cb (on_error_cb cb)

Protected Attributes

• on_error_cb on_error_cb_

10.23.1 Detailed Description

Definition at line 507 of file base_streamer.h.

10.23.2 Member Typedef Documentation

```
10.23.2.1 ptr
```

```
typedef std::shared_ptr<ISink> vxg::media::Streamer::ISink::ptr
```

std::shared_ptr alias

Definition at line 512 of file base_streamer.h.

10.23.2.2 PtrU

```
typedef std::unique_ptr<ISink> vxg::media::Streamer::ISink::PtrU
```

std::unique_ptr alias

Definition at line 514 of file base streamer.h.

10.23.3 Constructor & Destructor Documentation

10.23.3.1 ISink()

Construct a new ISink object.

Parameters

prio internall thread priority, used on RTOS.

Definition at line 519 of file base_streamer.h.

10.23.3.2 ∼ISink()

```
virtual vxg::media::Streamer::ISink::~ISink ( ) [inline], [virtual]
```

Definition at line 525 of file base_streamer.h.

10.23.4 Member Function Documentation

10.23.4.1 droppable()

```
virtual bool vxg::media::Streamer::ISink::droppable ( ) [pure virtual]
```

If sink of with dropping its media frames.

Returns

true Internal media thread allowed to drop frames if internal media queue is full. false No media frames dropping allowed.

Implemented in vxg::media::rtmp_sink, and vxg::media::ffmpeg::Sink.

10.23.4.2 duration()

```
virtual cloud::duration vxg::media::Streamer::ISink::duration ( ) [inline], [virtual]
```

Processed stream duration.

Returns

duration

Reimplemented in vxg::media::ffmpeg::Sink.

Definition at line 617 of file base_streamer.h.

10.23.4.3 error()

Media processing error callback, called when ISink::process returned false or linked source's ISource::pullFrame returned false, or when ISource::error was called.

Method may be overriden, default implementation calls on_error_cb that was provided by user with set_error_cb().

Parameters

```
error Error type.
```

Reimplemented in vxg::media::ffmpeg::Sink.

Definition at line 574 of file base_streamer.h.

10.23.4.4 finit()

```
virtual bool vxg::media::Streamer::ISink::finit ( ) [pure virtual]
```

Deinit sink.

Returns

true finit success.

false finit failed.

Implemented in vxg::media::ffmpeg::Sink.

10.23.4.5 init()

Init sink.

Parameters

in	url	Url if needed.
	u,,	On in moodod.

Returns

true init success.

false init failed.

Implemented in vxg::media::ffmpeg::Sink, and vxg::media::rtmp_sink.

10.23.4.6 name()

```
virtual std::string vxg::media::Streamer::ISink::name ( ) [pure virtual]
```

Sink name.

Returns

std::string

Implemented in vxg::media::rtmp_sink, and vxg::media::ffmpeg::Sink.

10.23.4.7 negotiate()

Negotiation callback, this method called with collected from the ISource::negotiate media stream description.

Parameters

info	List of elementary streams descriptions.
------	--

Returns

true If streams descriptions accepted.

false Streams not accepted, will cause media thread stopping.

 $\label{lem:lemented$

Definition at line 564 of file base_streamer.h.

10.23.4.8 process()

Process next media frame.

Internal function called by media thread, the last function of media frame travel. Final class process frame in this function: sends to server, writes on disk etc.

Parameters

in	frame	Media frame.
----	-------	--------------

Returns

true Media frame successfully processed.

false Media frame processing failed.

10.23.4.9 set_eos()

Definition at line 680 of file base_streamer.h.

10.23.4.10 set_eos_cb()

Definition at line 676 of file base_streamer.h.

10.23.4.11 set_error_cb()

Definition at line 682 of file base_streamer.h.

10.23.5 Field Documentation

10.23.5.1 on_error_cb_

on_error_cb vxg::media::Streamer::ISink::on_error_cb_ [protected]

Definition at line 685 of file base_streamer.h.

The documentation for this class was generated from the following file:

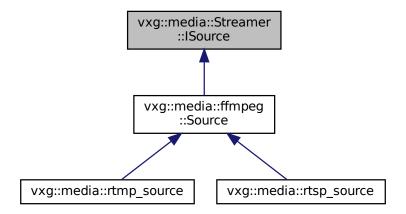

• base_streamer.h

10.24 vxg::media::Streamer::ISource Class Reference

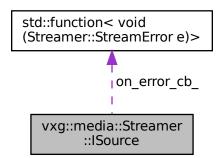

ISource interface class.

#include <streamer/base_streamer.h>

Inheritance diagram for vxg::media::Streamer::ISource:

Collaboration diagram for vxg::media::Streamer::ISource:

Public Types

• enum Mode { PULL, PUSH }

Source operation mode.

typedef std::shared_ptr< |Source > ptr

Public Member Functions

• ISource (uint8_t _prio=SRC_THREAD_PRIO, Mode _mode=PULL, bool drop=true)

Construct a new ISource object.

• virtual bool init (std::string url="")=0

Init source.

• virtual void finit ()=0

Finit souce.

virtual void error (StreamError stream_error)

Error notification.

virtual std::vector< Streamer::StreamInfo > negotiate ()=0

Negotiation callback.

virtual std::shared_ptr< MediaFrame > pullFrame ()=0

Main method of the Mode::PULL mode data producing.

virtual std::string name ()=0

Source class name.

void pushFrame (std::shared_ptr< MediaFrame > frame)

Implementation should call this method to provide media frames in the Mode::PUSH source operation mode.

void set_error_cb (on_error_cb cb)

Protected Attributes

- Mode mode_
- on_error_cb on_error_cb_

10.24.1 Detailed Description

ISource interface class.

Definition at line 708 of file base_streamer.h.

10.24.2 Member Typedef Documentation

```
10.24.2.1 ptr
```

```
typedef std::shared_ptr<ISource> vxg::media::Streamer::ISource::ptr
```

Definition at line 713 of file base_streamer.h.

10.24.3 Member Enumeration Documentation

10.24.3.1 Mode

enum vxg::media::Streamer::ISource::Mode

Source operation mode.

Enumerator

PULL	Pull mode. The ISource::pullFrame() will be called from the separate thread. User should implement it and return std::shared_ptr <mediaframe>.</mediaframe>
PUSH	Push mode. Inherited class should feed media data on its own by calling the ISource::pushFrame() method with MediaFrame object passed as argument.

Definition at line 715 of file base_streamer.h.

10.24.4 Constructor & Destructor Documentation

10.24.4.1 | ISource()

Construct a new ISource object.

Parameters

in	_prio	_prio Push thread priority. Used if _mode is Mode::PUSH.	
in	_mode	Source operating mode.	
in	drop	If true he media frames may be dropped if queue is full.	

Definition at line 731 of file base_streamer.h.

10.24.5 Member Function Documentation

10.24.5.1 error()

Error notification.

Calling this method will inform media thread and all sinks about error happened in the source.

Parameters

in	stream_error	

Definition at line 767 of file base_streamer.h.

10.24.5.2 finit()

```
virtual void vxg::media::Streamer::ISource::finit ( ) [pure virtual]
```

Finit souce.

Implemented in vxg::media::ffmpeg::Source.

10.24.5.3 init()

Init source.

Parameters

```
url Url if needed.
```

Returns

true Init success.

false Init failed.

Implemented in vxg::media::ffmpeg::Source, vxg::media::rtsp_source, and vxg::media::rtmp_source.

10.24.5.4 name()

```
virtual std::string vxg::media::Streamer::ISource::name ( ) [pure virtual]
```

Source class name.

Returns

std::string

Implemented in vxg::media::rtsp_source, and vxg::media::ffmpeg::Source.

10.24.5.5 negotiate()

```
virtual std::vector<Streamer::StreamInfo> vxg::media::Streamer::ISource::negotiate ( ) [pure
virtual]
```

Negotiation callback.

Called by internals. Class implementation should return the list of the streams info source will be producing for the sinks, this list will be then passed to the ISink::negotiate method.

Returns

```
std::vector<Streamer::StreamInfo>
```

Implemented in vxg::media::ffmpeg::Source.

10.24.5.6 pullFrame()

```
virtual std::shared_ptr<MediaFrame> vxg::media::Streamer::ISource::pullFrame ( ) [pure virtual]
```

Main method of the Mode::PULL mode data producing.

Called by internals if the source operation mode is Mode::PULL. Implementation should return media frame object with correctly filled fields.

Returns

```
std::shared_ptr<MediaFrame>
```

Implemented in vxg::media::ffmpeg::Source.

10.24.5.7 pushFrame()

Implementation should call this method to provide media frames in the Mode::PUSH source operation mode.

Parameters

frame	smart pointer to MediaFrame.

Definition at line 870 of file base_streamer.h.

10.24.5.8 set_error_cb()

Definition at line 971 of file base_streamer.h.

10.24.6 Field Documentation

10.24.6.1 mode_

```
Mode vxg::media::Streamer::ISource::mode_ [protected]
```

Definition at line 1009 of file base streamer.h.

10.24.6.2 on_error_cb_

```
on_error_cb vxg::media::Streamer::ISource::on_error_cb_ [protected]
```

Definition at line 1010 of file base_streamer.h.

10.26.4.1 critical()

Definition at line 315 of file logging.h.

10.26.4.2 debug() [1/2]

Definition at line 282 of file logging.h.

10.26.4.3 debug() [2/2]

Definition at line 295 of file logging.h.

10.26.4.4 error() [1/2]

Definition at line 274 of file logging.h.

10.26.4.5 error() [2/2]

Definition at line 310 of file logging.h.

10.26.4.6 info() [1/2]

Static info log.

Template Parameters

FormatString	
Args	

Parameters

fmt	
args	

Definition at line 270 of file logging.h.

10.26.4.7 info() [2/2]

Definition at line 300 of file logging.h.

10.26.4.8 instance()

Get pointer to the instance of the named spdlog::logger object.

On the very first call creates default logger named 'default'. Contructs new logger if logger with such name was never requested

Parameters

in	name	Logger name. If logger with such name was already created, then it will be reused, otherwise a
		new one will be constructed.

Returns

```
std::shared_ptr<spdlog::logger>
```

Definition at line 192 of file logging.h.

10.26.4.9 reset() [1/2]

Definition at line 239 of file logging.h.

10.26.4.10 reset() [2/2]

```
static void vxg::logger::reset (
    int argc,
    char ** argv,
    loglevel 1,
    std::string syslog_ident = "VXGCloudAgentDefault",
    std::string crash_logfile_path = "",
    std::string logfile_path = "",
    size_t logfile_max_size = (1024 * 1024),
    size_t logfile_max_files = 3 ) [inline], [static]
```

Reset default logger parameters.

Used to change all loggers parameters such as syslog/file sinks usage. Should be called before very first logger::instance() call to take effect. If wasn't called the default console logging sink only will be used for all loggers.

Deprecated Use reset(const options& opts)

Parameters

argc	Process argc
argv	Process argv
1	default loglevel, all loggers will be created with this loglevel, can be overriden with SPDLOG_LEVEL env variable
syslog_ident	Syslog identification string, if empty syslog logging will be disabled.
logfile_path	Rotating plain log file path, if empty no plain log file will be used.
logfile_max_size	Max log file size before invoking logrotate.
logfile_max_files	Max number if rotating logfiles.

Definition at line 220 of file logging.h.

10.26.4.11 set_level()

Change the logger object loglevel.

Parameters

log_ptr	Logger object pointer.
lvl	New loglevel.

Definition at line 259 of file logging.h.

10.26.4.12 trace() [1/2]

Definition at line 286 of file logging.h.

10.26.4.13 trace() [2/2]

Definition at line 290 of file logging.h.

10.26.4.14 warn() [1/2]

Definition at line 278 of file logging.h.

10.26.4.15 warn() [2/2]

Definition at line 305 of file logging.h.

10.27.1 Detailed Description

VXG Cloud agent manager class.

Definition at line 44 of file manager.h.

10.27.2 Member Typedef Documentation

10.27.2.1 direct_upload_payload_map

```
using vxg::cloud::agent::manager::direct_upload_payload_map = std::mapproto::upload_category,
std::shared_ptr<void> >
```

Definition at line 105 of file manager.h.

10.27.2.2 direct_upload_payload_map_ptr

```
using vxg::cloud::agent::manager::direct_upload_payload_map_ptr = std::shared_ptr<direct_upload_payload_map>
```

Definition at line 107 of file manager.h.

10.27.2.3 ptr

```
typedef std::shared_ptr<manager> vxg::cloud::agent::manager::ptr
```

shared_ptr to manager object

Definition at line 123 of file manager.h.

10.27.3 Member Function Documentation

10.27.3.1 __notify_record_event()

10.27.3.2 _update_storage_status()

```
bool vxg::cloud::agent::manager::_update_storage_status ( ) [protected]
```

10.27.3.3 create()

Create manager object.

Parameters

in	config	
in	callback	cm::callback object, should not be null
in	access_token	VXG Cloud access token
in	media_streams	List of std::shared_ptr to base_stream derived objects. Should have at least one element. base_stream is abstract class so you need to declare you own class derived from the base_stream or use one of the provided classes (rtsp_stream,), basically each stream is for example one rtsp stream provided by the device. Each media stream device has should be represented as a separate base_stream derived object, currently only two streams per device are supported by the VXG Cloud.
in	event_streams	List of event_stream::ptr, can be empty. event_stream is abstract class so final
		implementation should use own class derived from the event_stream.Generated by Doxygen

Returns

manager::ptr

10.27.3.4 handle_event()

10.27.3.5 handle_event_meta_file()

10.27.3.6 handle_event_snapshot()

10.27.3.7 on_audio_file_play()

10.27.3.8 on_cam_memorycard_recording()

10.27.3.9 on_cam_memorycard_synchronize()

10.29 vxg::media::Streamer::MediaFrame Struct Reference

Media frame container.

#include <streamer/base_streamer.h>

Collaboration diagram for vxg::media::Streamer::MediaFrame:

Public Member Functions

bool operator< (const MediaFrame &rv)

Two frames comparation using timestamps.

Data Fields

std::vector< uint8_t > data

Media frame data.

• size t len

Media frame data length.

int64_t pts

Media frame timestamp in timescale that corresponds to timescale.

• int64_t dts

 ${\it Media\ frame\ decoding\ timestamp\ in\ timescale\ that\ corresponds\ to\ timescale.}$

• int64_t duration

Media frame duration if needed.

· bool is_key

Is key frame flag.

MediaType type

Media frame type.

• std::pair< int, int > timescale

Timescale of pts and duration. ex.: 1/90000, 1/1000 etc.

• int64_t time_realtime

Real time if available from source, for ex.

Static Public Attributes

• static constexpr int64_t NO_PTS

10.29.1 Detailed Description

Media frame container.

Definition at line 418 of file base_streamer.h.

10.29.2 Member Function Documentation

10.29.2.1 operator<()

Two frames comparation using timestamps.

Parameters

```
rv Right value
```

Returns

true

false

Definition at line 436 of file base_streamer.h.

10.30 vxg::cloud::agent::proto::motion_detection_caps Struct Reference

Motion detection capabilities camera capabilities that limit possible motion detection configuration.

```
#include <agent-proto/objects/caps.h>
```

Data Fields

size_t max_regions

Mandatory: supported number of motion regions.

· motion sensitivity sensitivity

Mandatory: ("region", "frame"), default "region"; indicates if sensitivity can be set for region or for whole frame only.

• motion_region_shape region_shape

Mandatory: ("rect", "any"), default "any"; specifies limitation of region shape.

10.30.1 Detailed Description

Motion detection capabilities camera capabilities that limit possible motion detection configuration.

Definition at line 336 of file caps.h.

10.30.2 Field Documentation

10.30.2.1 max regions

size_t vxg::cloud::agent::proto::motion_detection_caps::max_regions

Mandatory: supported number of motion regions.

Definition at line 339 of file caps.h.

10.30.2.2 region_shape

motion_region_shape vxg::cloud::agent::proto::motion_detection_caps::region_shape

Mandatory: ("rect", "any"), default "any"; specifies limitation of region shape.

Definition at line 348 of file caps.h.

10.30.2.3 sensitivity

```
motion_sensitivity vxg::cloud::agent::proto::motion_detection_caps::sensitivity
```

Mandatory: ("region", "frame"), default "region"; indicates if sensitivity can be set for region or for whole frame only.

Definition at line 344 of file caps.h.

The documentation for this struct was generated from the following file:

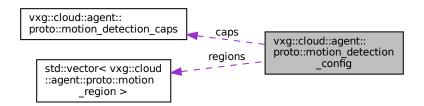

caps.h

10.31 vxg::cloud::agent::proto::motion_detection_config Struct Reference

Motion detection config.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::proto::motion_detection_config:

Data Fields

· int columns

Mandatory.

· int rows

Mandatory.

· motion_detection_caps caps

Mandatory for CM => SRV (reply to 'get_motion_detection') camera capabilities that limit possible motion detection configuration.

• std::vector< motion_region > regions

Mandatory List of motion regions.

10.31.1 Detailed Description

Motion detection config.

Definition at line 277 of file config.h.

10.31.2 Field Documentation

10.31.2.1 caps

motion_detection_caps vxg::cloud::agent::proto::motion_detection_config::caps

Mandatory for CM => SRV (reply to 'get_motion_detection') camera capabilities that limit possible motion detection configuration.

Definition at line 286 of file config.h.

10.31.2.2 columns

int vxg::cloud::agent::proto::motion_detection_config::columns

Mandatory.

Definition at line 280 of file config.h.

10.31.2.3 regions

std::vector<motion_region> vxg::cloud::agent::proto::motion_detection_config::regions

Mandatory List of motion regions.

Definition at line 289 of file config.h.

10.31.2.4 rows

int vxg::cloud::agent::proto::motion_detection_config::rows

Mandatory.

Definition at line 283 of file config.h.

The documentation for this struct was generated from the following file:

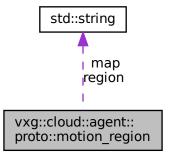

· config.h

10.32 vxg::cloud::agent::proto::motion_region Struct Reference

Motion detection related structs.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::proto::motion_region:

Data Fields

· std::string region

Mandatory: name of region if supported by camera.

std::string map

Mandatory: String is packed with Apple Packbit algorithm and after that encoded with Base64.

· size t sensitivity

Mandatory: range 0-100; 0 - minimal sensitivity.

• bool enabled

Mandatory: indicates that motion detection is enabled for the region.

10.32.1 Detailed Description

Motion detection related structs.

Motion region

Definition at line 240 of file config.h.

10.32.2 Field Documentation

10.32.2.1 enabled

```
bool vxg::cloud::agent::proto::motion_region::enabled
```

Mandatory: indicates that motion detection is enabled for the region.

Definition at line 262 of file config.h.

10.32.2.2 map

```
std::string vxg::cloud::agent::proto::motion_region::map
```

Mandatory: String is packed with Apple Packbit algorithm and after that encoded with Base64.

Bitstring where "1" denotes an active cell and a "0" an inactive cell. The first cell is in the upper left corner. Then the cell order goes first from left to right and then from up to down. If the number of cells is not a multiple of 8 the last byte is padded with zeros.

Definition at line 252 of file config.h.

10.32.2.3 region

```
std::string vxg::cloud::agent::proto::motion_region::region
```

Mandatory: name of region if supported by camera.

Definition at line 243 of file config.h.

10.32.2.4 sensitivity

```
size_t vxg::cloud::agent::proto::motion_region::sensitivity
```

Mandatory: range 0-100; 0 - minimal sensitivity.

If sensitivity is supported only for whole frame, the same value should be used for all regions.

Definition at line 258 of file config.h.

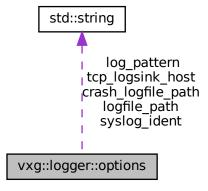

The documentation for this struct was generated from the following file:

· config.h

10.33 vxg::logger::options Struct Reference

```
#include <utils/logging.h>

10.34 vxg::cloud::agent::proto::osd caps Struct Reference

OSD capabilities.

#include <agent-proto/objects/caps.h>

Collaboration diagram for vxg::cloud::agent::proto::osd caps:

Data Fields

bool system_id

system_id: bool, True when OSD supports separate system_id enabling/disabling

bool system_id_text

system_id_text: bool, True when OSD supports separate system_id customization

bool time

time: bool, True when OSD supports separate time enabling/disabling

• std::vector< time_format_n > time_format

time_format: list of string, supported time formats.

bool date

date: bool, True when OSD supports separate date enabling/disabling

std::vector< std::string > date_format

date_format: list of string, supported date formats.

std::vector< std::string > font_size

font_size: list of string, describes supported font sizes.

 $\bullet \ \ \text{std::vector} < \ \text{std::pair} < \ \text{std::string}, \ \ \text{std::string} > > \ \text{font_color}$

font_color: list of pairs [string (name), optional string (value)], predefined set of possible font colors.

 $\bullet \quad \text{std::vector} < \ \text{std::string}, \ \ \text{std::string} >> \ \text{bkg_color}$

bkg_color: list of pairs [string (name), optional string (value)], predefined set of possible background colors.

bool bkg_transp

bkg_transp: bool, True when OSD supports background transparency

std::vector< std::string > alignment

alignment: list of strings, supported OSD positions.

10.34.1 Detailed Description

OSD capabilities.

Definition at line 621 of file caps.h.

10.34.2 Field Documentation

10.34.2.1 alignment

```
std::vector< std::string> vxg::cloud::agent::proto::osd_caps::alignment
```

alignment: list of strings, supported OSD positions.

Empty list means - position can't be changed. Example: ["UpperLeft", "UpperRight", "LowerLeft", "LowerRight"]

Definition at line 660 of file caps.h.

10.34.2.2 bkg_color

```
std::vector< std::pair< std::string, std::string> > vxg::cloud::agent::proto::osd_caps←
::bkg_color
```

bkg_color: list of pairs [string (name), optional string (value)], predefined set of possible background colors.

Empty list means – color selection is not supported. Optionaal value is a RGB color code in HEX. Example: $[["\leftarrow Black", "000000"]]$

Definition at line 654 of file caps.h.

10.34.2.3 bkg_transp

bool vxg::cloud::agent::proto::osd_caps::bkg_transp

bkg_transp: bool, True when OSD supports background transparency

Definition at line 656 of file caps.h.

10.34.2.4 date

bool vxg::cloud::agent::proto::osd_caps::date

date: bool, True when OSD supports separate date enabling/disabling

Definition at line 635 of file caps.h.

10.34.2.5 date_format

```
std::vector< std::string> vxg::cloud::agent::proto::osd_caps::date_format
```

date_format: list of string, supported date formats.

Empty list means – date format selection is not supported. Example: ["YYYY-MM-DD", "MM-DD-YYYY", "DD-MM-YYYY", "YYYY/MM/DD", "MM/DD/YYYY2, "DD/MM/YYYY"]

Definition at line 639 of file caps.h.

10.34.2.6 font_color

```
\label{thm:std::string} \textbf{std::string} > \texttt{vxg::cloud::agent::proto::osd\_caps} \leftarrow \texttt{::font\_color}
```

font_color: list of pairs [string (name), optional string (value)], predefined set of possible font colors.

Empty list means – color selection is not supported. Optionaal value is a RGB color code in HEX. Example: $[["\leftarrow Orange", "FF9C00"]]$

Definition at line 648 of file caps.h.

10.34.2.7 font_size

```
std::vector< std::string> vxg::cloud::agent::proto::osd_caps::font_size
```

font_size: list of string, describes supported font sizes.

Empty list means – font size format selection is not supported. Examples: ["16", "32", "48", "64", "auto"] or ["Small", "Normal", "Big"]

Definition at line 643 of file caps.h.

10.34.2.8 system_id

bool vxg::cloud::agent::proto::osd_caps::system_id

system_id: bool, True when OSD supports separate system_id enabling/disabling

Definition at line 624 of file caps.h.

10.34.2.9 system_id_text

bool vxg::cloud::agent::proto::osd_caps::system_id_text

system_id_text: bool, True when OSD supports separate system_id customization

Definition at line 627 of file caps.h.

10.34.2.10 time

bool vxg::cloud::agent::proto::osd_caps::time

time: bool, True when OSD supports separate time enabling/disabling

Definition at line 629 of file caps.h.

10.34.2.11 time_format

std::vector<time_format_n> vxg::cloud::agent::proto::osd_caps::time_format

time_format: list of string, supported time formats.

Empty list means – time format selection is not supported. Example: ["12h", "24h"]

Definition at line 633 of file caps.h.

The documentation for this struct was generated from the following file:

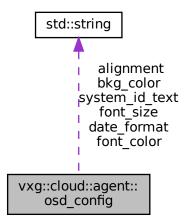

caps.h

10.35 vxg::cloud::agent::osd_config Struct Reference

OSD config.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::osd_config:

Data Fields

bool system_id

system_id: optional bool, enable/disable static part of OSD

• std::string system_id_text

system_id_text: optional string, a static content of OSD

· bool time

time: optional bool, enable/disable time part of OSD

• time_format_n time_format

time_format: optional string, one of predefined values from the time_format_n, should be included in caps.

· bool date

date: optional bool, enable/disable date part of OSD

std::string date_format

date_format: optional string, one of predefined values from caps

std::string font_size

font_size: optional string, one of predefined font sizes from caps

std::string font_color

font_color: optional string, name of one of predefined font colors from caps

• std::string bkg_color

bkg_color: optional string, name of one of predefined background colors from caps

bool bkg_transp

bkg_transp: optional bool, enable/disable OSD background transparency

· std::string alignment

alignment: optional string, one of predefined positions from caps

· osd_caps caps

OSD capabilities of the device.

10.35.1 Detailed Description

OSD config.

On Screen Display configuration object.

Definition at line 1134 of file config.h.

10.35.2 Field Documentation

10.35.2.1 alignment

```
std::string vxg::cloud::agent::osd_config::alignment
```

alignment: optional string, one of predefined positions from caps

Definition at line 1165 of file config.h.

10.35.2.2 bkg_color

```
std::string vxg::cloud::agent::osd_config::bkg_color
```

bkg_color: optional string, name of one of predefined background colors from caps

Definition at line 1161 of file config.h.

10.35.2.3 bkg_transp

```
bool vxg::cloud::agent::osd_config::bkg_transp
```

bkg_transp: optional bool, enable/disable OSD background transparency

Definition at line 1163 of file config.h.

10.35.2.4 caps

```
osd_caps vxg::cloud::agent::osd_config::caps
```

OSD capabilities of the device.

Definition at line 1168 of file config.h.

10.35.2.5 date

```
bool vxg::cloud::agent::osd_config::date
```

date: optional bool, enable/disable date part of OSD

Definition at line 1149 of file config.h.

10.35.2.6 date_format

```
std::string vxg::cloud::agent::osd_config::date_format
```

date_format: optional string, one of predefined values from caps

Definition at line 1152 of file config.h.

10.35.2.7 font_color

```
std::string vxg::cloud::agent::osd_config::font_color
```

font_color: optional string, name of one of predefined font colors from caps

Definition at line 1158 of file config.h.

10.35.2.8 font_size

```
\textbf{std}:: \textbf{string} \ \texttt{vxg}:: \texttt{cloud}:: \texttt{agent}:: \texttt{osd\_config}:: \texttt{font\_size}
```

font_size: optional string, one of predefined font sizes from caps

Definition at line 1155 of file config.h.

10.35.2.9 system_id

```
bool vxg::cloud::agent::osd_config::system_id
```

system_id: optional bool, enable/disable static part of OSD

Definition at line 1137 of file config.h.

10.35.2.10 system_id_text

```
std::string vxg::cloud::agent::osd_config::system_id_text
```

system_id_text: optional string, a static content of OSD

Definition at line 1140 of file config.h.

10.35.2.11 time

bool vxg::cloud::agent::osd_config::time

time: optional bool, enable/disable time part of OSD

Definition at line 1143 of file config.h.

10.35.2.12 time_format

```
\verb|time_format_n| vxg::cloud::agent::osd_config::time_format|
```

time_format: optional string, one of predefined values from the time_format_n, should be included in caps.

Definition at line 1146 of file config.h.

PTZ config.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::ptz_config:

Data Fields

- std::vector < ptz_action > actions
 actions: list of strings, list of supported PTZ actions.
- int maximum_number_of_presets

maximum_number_of_presets: optional int, max number of supported presets when camera supports.

std::vector< ptz_preset > presets

presets: optional list of structures ptz_preset

10.39.1 Detailed Description

PTZ config.

Definition at line 1087 of file config.h.

10.39.2 Field Documentation

10.39.2.1 actions

```
std::vector<ptz_action> vxg::cloud::agent::ptz_config::actions
```

actions: list of strings, list of supported PTZ actions.

Possible values: "left", "right", "top", "bottom", "zoom_in", "zoom_out", "stop". Server sends commands via 3.5 cam ptz (SRV)

Definition at line 1091 of file config.h.

10.39.2.2 maximum number of presets

```
\verb"int vxg::cloud::agent::ptz_config::maximum_number_of\_presets"
```

maximum_number_of_presets: optional int, max number of supported presets when camera supports.

Zero value, the missed parameter or missed or empty presets list are interpreted by server as "camera doesn't support PTZ"

Definition at line 1097 of file config.h.

10.39.2.3 presets

```
\textbf{std}:: \textbf{vector} < \texttt{ptz\_preset} > \ \texttt{vxg}:: \texttt{cloud}:: \texttt{agent}:: \texttt{ptz\_config}:: \texttt{presets}
```

presets: optional list of structures ptz_preset

Definition at line 1100 of file config.h.

• streamer/stream.h

10.43 vxg::media::rtmp_sink Class Reference

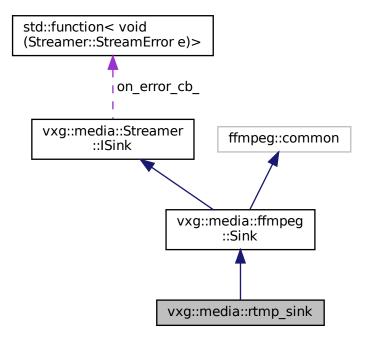

RTMP sink class.

#include <streamer/rtmp_sink.h>

Inheritance diagram for vxg::media::rtmp_sink:

Collaboration diagram for vxg::media::rtmp_sink:

Public Member Functions

• rtmp sink ()

Construct a new rtmp sink object.

• virtual bool init (std::string url) override

Overriden vxg::media::ffmpeg::Sink::init(std::string, std::string) "init" method with hidden output ffmpeg format.

• virtual std::string name () override

Sink name.

• virtual bool droppable () override

If sink of with dropping its media frames.

bool negotiate (std::vector < Streamer::StreamInfo > streams_info)

Override negotiate() for removing all data streams.

Additional Inherited Members

10.43.1 Detailed Description

RTMP sink class.

Definition at line 13 of file rtmp_sink.h.

10.43.2 Constructor & Destructor Documentation

10.43.2.1 rtmp_sink()

```
vxg::media::rtmp_sink::rtmp_sink ( ) [inline]
```

Construct a new rtmp sink object.

Definition at line 18 of file rtmp_sink.h.

10.43.3 Member Function Documentation

10.43.3.1 droppable()

```
virtual bool vxg::media::rtmp_sink::droppable ( ) [inline], [override], [virtual]
```

If sink of with dropping its media frames.

Returns

true Internal media thread allowed to drop frames if internal media queue is full. false No media frames dropping allowed.

Reimplemented from vxg::media::ffmpeg::Sink.

Definition at line 32 of file rtmp_sink.h.

10.43.3.2 init()

 $Overriden\ vxg::media::ffmpeg::Sink::init(\ \textbf{std}::\textbf{string})\ "init"\ method\ with\ hidden\ output\ ffmpeg\ format.$

Parameters

```
url RTMP url
```

Returns

true On success false On failure

Reimplemented from vxg::media::ffmpeg::Sink.

Definition at line 26 of file rtmp_sink.h.

10.43.3.3 name()

```
virtual std::string vxg::media::rtmp_sink::name ( ) [inline], [override], [virtual]
```

Sink name.

Returns

std::string

Reimplemented from vxg::media::ffmpeg::Sink.

Definition at line 30 of file rtmp_sink.h.

10.43.3.4 negotiate()

Override negotiate() for removing all data streams.

This is required for preventing buffering inside the ffmpeg muxer, ffmpeg waits for at least one packet for each stream or 10 seconds by default before output next chunk, this leads to 10 seconds delay if data track was added to output muxing context but no actual data packets were received hence sparse streams like onvif metadata may significantly increase delay.

Parameters

in	streams_info	- list of streams descrtiptions.

Returns

true

false

Reimplemented from vxg::media::ffmpeg::Sink.

Definition at line 45 of file rtmp_sink.h.

The documentation for this class was generated from the following file:

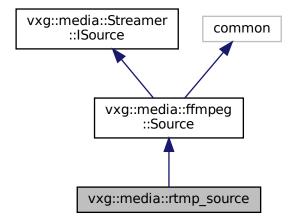

• rtmp_sink.h

10.44 vxg::media::rtmp_source Class Reference

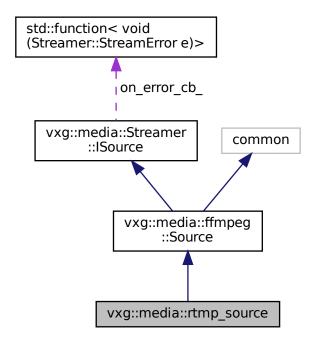

RTMP source class.

#include <streamer/rtmp_source.h>

Inheritance diagram for vxg::media::rtmp_source:

Collaboration diagram for vxg::media::rtmp_source:

10.45.2.1 transport

```
enum vxg::media::rtsp_source::transport
```

Enumerator

UDP	
TCP	
UDP_MULTICAST	
HTTP	
HTTPS	
ASYNC_TCP	

Definition at line 15 of file rtsp_source.h.

10.45.3 Constructor & Destructor Documentation

10.45.3.1 rtsp_source()

Construct a new rtsp source object.

Parameters

i	in	rtp_transport	RTSP transport.
i	in	media_types	List of media types to ask from RTSP server, can be used to filter out unnecessary
			tracks. If empty all types will be requested.
i	in	ffmpeg_opts	Map of ffmpeg options key values pairs.

Parameters

in	timeout	RTSP client io timeout. Doesn't mean the connection will be closed after this timeout but specifies the amount of time ffmpeg spends in io loop spinning, infinite timeout
		causes spinning forever if connection wasn't closed but no data was received.
in	in streams	Input streams. Media formats source should use instead of auto-detection, this may
	_	decrease source start time and memory usage. Empty array causes

Definition at line 74 of file rtsp_source.h.

10.45.4 Member Function Documentation

```
10.45.4.1 __transport_to_ff()
```

Definition at line 28 of file rtsp_source.h.

10.45.4.2 init()

Overloaded init method.

Parameters

```
in url RTSP URL link
```

Returns

true

false

Reimplemented from vxg::media::ffmpeg::Source.

Definition at line 93 of file rtsp_source.h.

10.45.4.3 name()

virtual std::string vxg::media::rtsp_source::name () [inline], [override], [virtual]
Source class name.

Returns

std::string

Reimplemented from vxg::media::ffmpeg::Source.

Definition at line 185 of file rtsp source.h.

10.45.5 Field Documentation

10.45.5.1 ffmpeg_opts_

```
std::map< std::string, std::string> vxg::media::rtsp_source::ffmpeg_opts_ [protected]

 vxg::media::Streamer::MediaType > { vxg::media::Streamer::VIDEO, vxg::media::Streamer::AUDIO}), bool recorder_needs_source=false)

Construct a new rtsp stream object.

- virtual ~rtsp_stream ()
- virtual bool start (std::string not_used="") override

Additional Inherited Members

10.46.1 Detailed Description

Implementation of the media::stream with RTSP source and NIY stubs.

Definition at line 17 of file rtsp-stream.h.

10.46.2 Member Typedef Documentation

```
10.46.2.1 ptr
```

```
typedef std::shared_ptr<rtsp_stream> vxg::cloud::agent::media::rtsp_stream::ptr
```

Definition at line 29 of file rtsp-stream.h.

10.46.3 Constructor & Destructor Documentation

10.46.3.1 rtsp_stream()

Construct a new rtsp stream object.

Parameters

source_url	RTSP url
name	Unique stream name
rtsp_src	external rtsp_source object pointer
recorder_needs_source	Indicates if stream needs source start before calling start_record() virtual method.

Definition at line 37 of file rtsp-stream.h.

10.46.3.2 ∼rtsp_stream()

```
virtual vxg::cloud::agent::media::rtsp_stream::~rtsp_stream ( ) [inline], [virtual]
```

Definition at line 52 of file rtsp-stream.h.

10.46.4 Member Function Documentation

10.46.4.1 start()

Reimplemented from vxg::media::stream.

Definition at line 54 of file rtsp-stream.h.

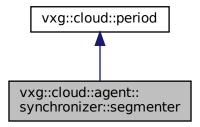

The documentation for this class was generated from the following file:

rtsp-stream.h

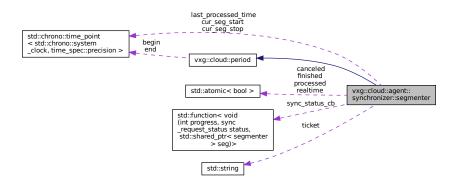

10.47 vxg::cloud::agent::synchronizer::segmenter Struct Reference

#include <agent/timeline-synchronizer.h>

Inheritance diagram for vxg::cloud::agent::synchronizer::segmenter:

Collaboration diagram for vxg::cloud::agent::synchronizer::segmenter:

Public Types

typedef std::shared_ptr< segmenter > ptr

Public Member Functions

10.48 vxg::media::ffmpeg::Sink Class Reference

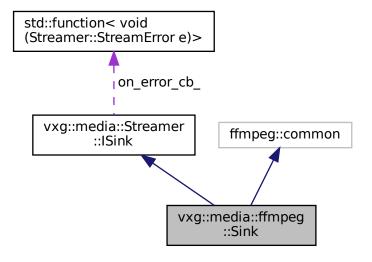

Base ffmpeg sink class.

#include <streamer/ffmpeg_sink.h>

Inheritance diagram for vxg::media::ffmpeg::Sink:

Collaboration diagram for vxg::media::ffmpeg::Sink:

Public Member Functions

- Sink ()
- virtual ~Sink ()
- virtual bool init (std::string url="")

Init sink.

virtual bool finit ()

Deinit sink.

- virtual void stop ()
- virtual void error (Streamer::StreamError stream_error)

Media processing error callback, called when ISink::process returned false or linked source's ISource::pullFrame returned false, or when ISource::error was called.

• virtual std::string name ()

Sink name.

• virtual bool droppable ()

If sink of with dropping its media frames.

virtual bool negotiate (std::vector < Streamer::StreamInfo >)

Negotiation callback, this method called with collected from the ISource::negotiate media stream description.

virtual cloud::duration duration ()

Processed stream duration.

Additional Inherited Members

10.48.1 Detailed Description

Base ffmpeg sink class.

Definition at line 12 of file ffmpeg_sink.h.

10.48.2 Constructor & Destructor Documentation

10.48.2.1 Sink()

```
vxg::media::ffmpeg::Sink::Sink ( )
```

10.48.2.2 ∼Sink()

```
virtual vxg::media::ffmpeg::Sink::~Sink ( ) [virtual]
```

10.48.3 Member Function Documentation

10.48.3.1 droppable()

```
virtual bool vxg::media::ffmpeg::Sink::droppable ( ) [inline], [virtual]
```

If sink of with dropping its media frames.

Returns

true Internal media thread allowed to drop frames if internal media queue is full. false No media frames dropping allowed.

Implements vxg::media::Streamer::ISink.

Reimplemented in vxg::media::rtmp_sink.

Definition at line 57 of file ffmpeg_sink.h.

10.48.3.2 duration()

```
virtual cloud::duration vxg::media::ffmpeg::Sink::duration ( ) [inline], [virtual]
```

Processed stream duration.

Returns

duration

Reimplemented from vxg::media::Streamer::ISink.

Definition at line 59 of file ffmpeg_sink.h.

10.48.3.3 error()

Media processing error callback, called when ISink::process returned false or linked source's ISource::pullFrame returned false, or when ISource::error was called.

Method may be overriden, default implementation calls on_error_cb that was provided by user with set_error_cb().

error	Error type.
-------	-------------

Reimplemented from vxg::media::Streamer::ISink.

Definition at line 33 of file ffmpeg_sink.h.

10.48.3.4 finit()

```
virtual bool vxg::media::ffmpeg::Sink::finit ( ) [virtual]
```

Deinit sink.

Returns

true finit success.

false finit failed.

Implements vxg::media::Streamer::ISink.

10.48.3.5 init() [1/2]

Sink init.

Parameters

url	Output url
fmt	Output format
data_buffer	Output buffer for output to memory, if specified and not nullptr the url will be ignored.

Returns

true On success

false On failure

10.48.3.6 init() [2/2]

Init sink.

Parameters

```
in url Url if needed.
```

Returns

true init success.

false init failed.

Implements vxg::media::Streamer::ISink.

Reimplemented in vxg::media::rtmp_sink.

10.48.3.7 name()

```
virtual std::string vxg::media::ffmpeg::Sink::name ( ) [inline], [virtual]
```

Sink name.

Returns

std::string

Implements vxg::media::Streamer::ISink.

Reimplemented in vxg::media::rtmp_sink.

Definition at line 55 of file ffmpeg sink.h.

10.48.3.8 negotiate()

Negotiation callback, this method called with collected from the ISource::negotiate media stream description.

Parameters

info List of elementary streams descriptions.

Returns

true If streams descriptions accepted.

false Streams not accepted, will cause media thread stopping.

Reimplemented from vxg::media::Streamer::ISink.

Reimplemented in vxg::media::rtmp_sink.

10.48.3.9 stop()

```
virtual void vxg::media::ffmpeg::Sink::stop ( ) [virtual]
```

Reimplemented from vxg::media::Streamer::ISink.

The documentation for this class was generated from the following file:

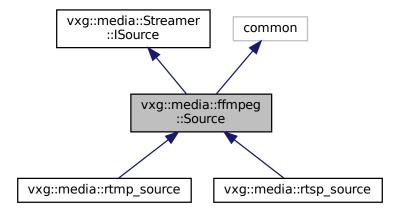

· ffmpeg_sink.h

10.49 vxg::media::ffmpeg::Source Class Reference

```
void vxg::media::ffmpeg::Source::finit ( ) [virtual]
```

Finit souce.

Implements vxg::media::Streamer::ISource.

Definition at line 32 of file ffmpeg_source.cc.

10.49.3.2 init() [1/3]

Init ffmpeg memory source with specific ffmpeg options.

Parameters

in	input_buffer	Input memory buffer containing whole media.	
in	opts	ffmpeg options	
in	fmt by Doxygen	ffmpeg input format to prevent auto-detection. ex.: "flv", "mp4", "http" etc.	

Returns

true

false

Definition at line 22 of file ffmpeg_source.cc.

10.49.3.3 init() [2/3]

Init ffmpeg source with specific ffmpeg options.

Parameters

in	url	Url
in	opts	ffmpeg options
in	fmt	ffmpeg input format to prevent auto-detection. ex.: "flv", "rtsp", "http" etc.

Returns

true

false

Definition at line 16 of file ffmpeg_source.cc.

10.49.3.4 init() [3/3]

Init source.

Parameters

url Url if needed.	
--------------------	--

Returns

true Init success.

false Init failed.

Implements vxg::media::Streamer::ISource.

Reimplemented in vxg::media::rtsp_source, and vxg::media::rtmp_source.

Definition at line 28 of file ffmpeg_source.cc.

10.49.3.5 name()

```
virtual std::string vxg::media::ffmpeg::Source::name () [inline], [virtual]
```

Source class name.

Returns

std::string

Implements vxg::media::Streamer::ISource.

Reimplemented in vxg::media::rtsp_source.

Definition at line 42 of file ffmpeg_source.h.

10.49.3.6 negotiate()

```
std::vector< Streamer::StreamInfo > vxg::media::ffmpeg::Source::negotiate ( ) [virtual]
```

Negotiation callback.

Called by internals. Class implementation should return the list of the streams info source will be producing for the sinks, this list will be then passed to the ISink::negotiate method.

Returns

```
std::vector<Streamer::StreamInfo>
```

Implements vxg::media::Streamer::ISource.

Definition at line 36 of file ffmpeg_source.cc.

10.49.3.7 pullFrame()

```
std::shared_ptr< Streamer::MediaFrame > vxg::media::ffmpeg::Source::pullFrame ( ) [virtual]
```

Main method of the Mode::PULL mode data producing.

Called by internals if the source operation mode is Mode::PULL. Implementation should return media frame object with correctly filled fields.

Returns

```
std::shared_ptr<MediaFrame>
```

Implements vxg::media::Streamer::ISource.

Definition at line 95 of file ffmpeg_source.cc.

10.49.3.8 stop()

```
void vxg::media::ffmpeg::Source::stop ( ) [virtual]
```

Reimplemented from vxg::media::Streamer::ISource.

Definition at line 191 of file ffmpeg_source.cc.

The documentation for this class was generated from the following files:

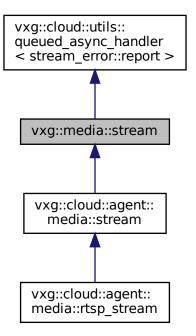

- ffmpeg_source.h

media sink

10.50.1 Detailed Description

base media stream abstract class

Media stream is the class representing media stream retranslation from the media source derived from the Streamer::ISource to the media sink derived from the Streamer::ISink. For instance, media stream could be a pair of RTSP source and RTMP sink, i.e. such media stream will be a retranslator of the RTSP stream to the RTMP

Definition at line 56 of file streamer/stream.h.

10.50.2 Member Typedef Documentation

10.50.2.1 on_error_cb

```
using vxg::media::stream::on_error_cb = std::function<void(const stream_error::report& error)>
```

Definition at line 73 of file streamer/stream.h.

10.50.2.2 ptr

```
typedef std::shared_ptr<stream> vxg::media::stream::ptr
```

std::shared_ptr to the base_stream

Definition at line 77 of file streamer/stream.h.

10.50.3 Constructor & Destructor Documentation

10.50.3.1 stream()

Construct a new base stream object.

Parameters

name	Unique stream name which will be used by the VXG Cloud API
source	Source object pointer
sink	Sink object pointer

Definition at line 84 of file streamer/stream.h.

10.50.3.2 ∼stream()

```
virtual vxg::media::stream::~stream ( ) [inline], [virtual]
```

Reimplemented in vxg::cloud::agent::media::stream.

Definition at line 104 of file streamer/stream.h.

10.50.4 Member Function Documentation

10.50.4.1 finit_sink()

```
virtual void vxg::media::stream::finit_sink ( ) [inline], [virtual]
```

Deinitialize sink.

Derived class deinitialize and deallocates base_stream::sink_

Definition at line 158 of file streamer/stream.h.

10.50.4.2 finit_source()

```
virtual void vxg::media::stream::finit_source ( ) [inline], [virtual]
```

Deinitialize source.

Definition at line 128 of file streamer/stream.h.

10.50.4.3 init_sink()

Init media sink.

Derived class should allocate and initialize base_stream::sink_ with RTMP sink publishing media stream to the RTMP server pointed by the uri

in uri sink stream url if needed

Returns

true Sink started false Sink start failed

Definition at line 143 of file streamer/stream.h.

10.50.4.4 init source()

Initialize the source.

Called by the internal code, derived class should allocate and set base_stream::source_ with Streamer::ISink derived object pointer.

Parameters

```
url source url
```

Returns

true if successfully initialized source false if source initialization failed

Definition at line 115 of file streamer/stream.h.

10.50.4.5 set_on_error_cb()

Set the on_error callback.

Parameters

Definition at line 264 of file streamer/stream.h.

10.50.5 Field Documentation

10.50.5.1 sink_

Streamer::ISink::ptr vxg::media::stream::sink_ [protected]

media sink

Definition at line 273 of file streamer/stream.h.

10.50.5.2 source_

Streamer::ISource::ptr vxg::media::stream::source_ [protected]

media source

Definition at line 271 of file streamer/stream.h.

10.52 vxg::cloud::agent::media::stream_callbacks Class Reference

Cloud agent media stream callbacks abstract class.

#include <agent/stream.h>

Inheritance diagram for vxg::cloud::agent::media::stream_callbacks:

Public Member Functions

stream_callbacks (bool recorder_needs_source)

Construct a new stream callbacks object.

- virtual ~stream_callbacks ()
- virtual bool get_stream_caps (cloud::agent::proto::stream_caps &caps)=0

Get the media stream caps.

- virtual bool get_supported_stream (cloud::agent::proto::supported_stream_config &supported_stream)=0
 Get the supported stream description.
- virtual bool get_stream_config (cloud::agent::proto::stream_config &config)=0

Get the stream config.

virtual bool set stream config (const cloud::agent::proto::stream config &config)=0

Set the streams config.

- virtual bool get_snapshot (cloud::agent::proto::event_object::snapshot_info_object &snapshot)=0

 Get the snapshot image of this media stream.
- virtual bool record needs source ()

Should returns true if agent::manager should start stream source before calling start_record()

virtual bool start_record ()=0

Start recording of this media stream.

virtual void stop_record ()=0

Stop recording of this stream.

• virtual **std::vector**< cloud::agent::proto::video_clip_info > record_get_list (cloud::time begin, cloud::time end, bool align=true)=0

Get list of the recorded clips for specific time period.

virtual cloud::agent::proto::video_clip_info record_export (cloud::time begin, cloud::time end)=0
 Export recorded clip for specified time.

10.52.1 Detailed Description

Cloud agent media stream callbacks abstract class.

VXG Cloud proto callbacks related to media stream

Definition at line 19 of file agent/stream.h.

10.52.2 Constructor & Destructor Documentation

10.52.2.1 stream_callbacks()

Construct a new stream callbacks object.

Parameters

recorder peeds source	Indicates if stream needs source start
recorder needs source	i iliulcales il sileatii fieeus soulce siari il

Definition at line 29 of file agent/stream.h.

10.52.2.2 ~stream_callbacks()

```
virtual vxg::cloud::agent::media::stream_callbacks::~stream_callbacks ( ) [inline], [virtual]
```

Definition at line 31 of file agent/stream.h.

10.52.3 Member Function Documentation

10.52.3.1 get_snapshot()

Get the snapshot image of this media stream.

Parameters

out	snapshot	snapshot object
-----	----------	-----------------

Returns

true if snapshot is valid false if snapshot is invalid

10.52.3.2 get_stream_caps()

Get the media stream caps.

video/audio elementary streams caps request passes caps with names of the elementary streams for which caps are required to be filled inside this method

Parameters

```
out caps
```

Returns

true if caps valid false if caps is invalid

Implemented in vxg::cloud::agent::media::stream_callbacks_stub.

10.52.3.3 get_stream_config()

Get the stream config.

Parameters

in,o	it config	input config contains list of streams for which configuration should be returned
------	-----------	--

Returns

true if config is valid false if config is invalid

Implemented in vxg::cloud::agent::media::stream_callbacks_stub.

10.52.3.4 get_supported_stream()

Get the supported stream description.

Parameters

out	supported_stream	Stream supported by device
-----	------------------	----------------------------

Returns

true if supported_stream is valid
false if supported_stream is not valid

10.52.3.5 record_export()

Export recorded clip for specified time.

Parameters

begin	
end	

Returns

```
proto::video_clip_info
```

Implemented in vxg::cloud::agent::media::stream_callbacks_stub.

10.52.3.6 record_get_list()

Get list of the recorded clips for specific time period.

Parameters

in	begin	beginning of the time period
in	end	ending of the time period
in	align	Align returned records to key frames and begin/end. If true the implementation should align returned records to not include data with timestamps less than begin and greater than end. Also any returned record MUST start with key frame and the last frame of any not last record in the list MUST be the frame prior to key frame - first frame of the next record.
in	limit	Max records number that may be returned. Value 0 means no limitation.

Returns

```
std::vector<proto::video_clip_info>
```

Implemented in vxg::cloud::agent::media::stream_callbacks_stub.

10.52.3.7 record_needs_source()

```
virtual bool vxg::cloud::agent::media::stream_callbacks::record_needs_source ( ) [inline],
[virtual]
```

Should returns true if agent::manager should start stream source before calling start_record()

Returns

true agent::manager should start stream source false agent::manager may not start stream source

Definition at line 86 of file agent/stream.h.

10.52.3.8 set_stream_config()

Set the streams config.

Parameters

	in	config	input config contains list of streams for which configuration should be set	1
--	----	--------	---	---

Returns

true if config successfully set false if config failed to set

 $Implemented \ in \ vxg::cloud::agent::media::stream_callbacks_stub.$

10.52.3.9 start_record()

```
virtual bool vxg::cloud::agent::media::stream_callbacks::start_record ( ) [pure virtual]
```

Start recording of this media stream.

Called only if memory card is presented and can be used.

Returns

true if recording started false if recording start failed

See also

```
agent::event_stream::on_get_memorycard_info
```

Implemented in vxg::cloud::agent::media::stream_callbacks_stub.

10.52.3.10 stop_record()

virtual void vxg::cloud::agent::media::stream_callbacks::stop_record () [pure virtual]

Stop recording of this stream.

Implemented in vxg::cloud::agent::media::stream_callbacks_stub.

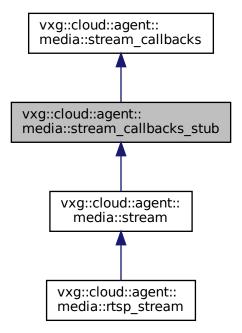

The documentation for this class was generated from the following file:

· agent/stream.h

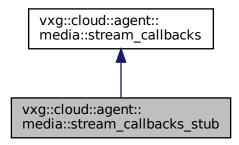

10.53 vxg::cloud::agent::media::stream_callbacks_stub Class Reference

#include <agent/stream.h>

Inheritance diagram for vxg::cloud::agent::media::stream_callbacks_stub:

Collaboration diagram for vxg::cloud::agent::media::stream_callbacks_stub:

Public Member Functions

- stream_callbacks_stub (std::string name, bool record_needs_source)
 - Construct a new stream callbacks stub object.
- virtual ∼stream callbacks stub ()
- bool get_supported_stream (proto::supported_stream_config &config) override
- virtual bool get_stream_caps (proto::stream_caps &caps) override
 - Get the media stream caps.
- virtual bool get_stream_config (proto::stream_config &streamConfig) override
 - Get the stream config.
- virtual bool set_stream_config (const proto::stream_config &streamConfig) override
 - Set the streams config.
- virtual bool get_snapshot (proto::event_object::snapshot_info_object &snapshot) override
- virtual std::vector< proto::video_clip_info > record_get_list (cloud::time begin, cloud::time end, bool align) override
 - Get list of the recorded clips for specific time period.
- · virtual proto::video clip info record export (cloud::time begin, cloud::time end) override
 - Export recorded clip for specified time.
- virtual bool start_record () override
 - Start recording of this media stream.
- virtual void stop_record () override
 - Stop recording of this stream.

10.53.1 Detailed Description

Definition at line 128 of file agent/stream.h.

10.53.2 Constructor & Destructor Documentation

10.53.2.1 stream_callbacks_stub()

Construct a new stream callbacks stub object.

Parameters

name	Stream name used for get_supported_stream() stub
record_needs_source	

Definition at line 142 of file agent/stream.h.

10.53.2.2 ~stream_callbacks_stub()

```
virtual vxg::cloud::agent::media::stream_callbacks_stub::~stream_callbacks_stub ( ) [inline],
[virtual]
```

Definition at line 144 of file agent/stream.h.

10.53.3 Member Function Documentation

10.53.3.1 get_snapshot()

Definition at line 177 of file agent/stream.h.

10.53.3.2 get_stream_caps()

Get the media stream caps.

video/audio elementary streams caps request passes caps with names of the elementary streams for which caps are required to be filled inside this method

```
out caps
```

Returns

```
true if caps valid false if caps is invalid
```

Implements vxg::cloud::agent::media::stream_callbacks.

Definition at line 157 of file agent/stream.h.

10.53.3.3 get_stream_config()

Get the stream config.

Parameters

in,out	config	input config contains list of streams for which configuration should be returned
--------	--------	--

Returns

```
true if config is valid false if config is invalid
```

Implements vxg::cloud::agent::media::stream callbacks.

Definition at line 163 of file agent/stream.h.

10.53.3.4 get_supported_stream()

Definition at line 146 of file agent/stream.h.

10.53.3.5 record_export()

Export recorded clip for specified time.

begin	
end	

Returns

```
proto::video_clip_info
```

Implements vxg::cloud::agent::media::stream_callbacks.

Definition at line 192 of file agent/stream.h.

10.53.3.6 record_get_list()

Get list of the recorded clips for specific time period.

Parameters

in	begin	beginning of the time period
in	end	ending of the time period
in	align	Align returned records to key frames and begin/end. If true the implementation should align returned records to not include data with timestamps less than begin and greater than end. Also any returned record MUST start with key frame and the last frame of any not last record in the list MUST be the frame prior to key frame - first frame of the next record.
in	limit	Max records number that may be returned. Value 0 means no limitation.

Returns

```
std::vector<proto::video_clip_info>
```

Implements vxg::cloud::agent::media::stream_callbacks.

Definition at line 185 of file agent/stream.h.

10.53.3.7 set_stream_config()

Set the streams config.

in	config	input config contains list of streams for which configuration should be set	1
----	--------	---	---

Returns

true if config successfully set false if config failed to set

Implements vxg::cloud::agent::media::stream_callbacks.

Definition at line 170 of file agent/stream.h.

10.53.3.8 start_record()

```
virtual bool vxg::cloud::agent::media::stream_callbacks_stub::start_record ( ) [inline],
[override], [virtual]
```

Start recording of this media stream.

Called only if memory card is presented and can be used.

Returns

true if recording started false if recording start failed

See also

```
agent::event_stream::on_get_memorycard_info
```

Implements vxg::cloud::agent::media::stream_callbacks.

Definition at line 200 of file agent/stream.h.

10.53.3.9 stop_record()

```
virtual void vxg::cloud::agent::media::stream_callbacks_stub::stop_record ( ) [inline], [override],
[virtual]
```

Stop recording of this stream.

Implements vxg::cloud::agent::media::stream_callbacks.

Definition at line 206 of file agent/stream.h.

The documentation for this class was generated from the following file:

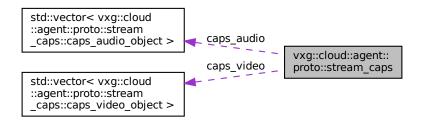

agent/stream.h

10.54 vxg::cloud::agent::proto::stream_caps Struct Reference

Media stream capabilites.

#include <agent-proto/objects/caps.h>

Collaboration diagram for vxg::cloud::agent::proto::stream_caps:

Data Structures

• struct caps_audio_object

Audio streams capabilities.

· struct caps_video_object

Video streams capabilities.

Data Fields

• std::vector< caps_video_object > caps_video

List of video streams capabilities.

• std::vector < caps_audio_object > caps_audio

List of audio streams capabilities.

10.54.1 Detailed Description

Media stream capabilites.

Definition at line 175 of file caps.h.

10.54.2 Field Documentation

10.54.2.1 caps_audio

std::vector<caps_audio_object> vxg::cloud::agent::proto::stream_caps::caps_audio

List of audio streams capabilities.

Definition at line 276 of file caps.h.

10.54.2.2 caps_video

std::vector<caps_video_object> vxg::cloud::agent::proto::stream_caps::caps_video

List of video streams capabilities.

Definition at line 274 of file caps.h.

The documentation for this struct was generated from the following file:

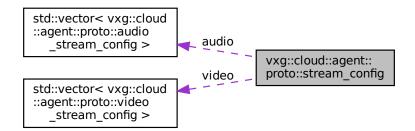

· caps.h

10.55 vxg::cloud::agent::proto::stream_config Struct Reference

Media stream config.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::proto::stream_config:

Data Fields

- std::vector< video_stream_config > video
 List of video media stream configs.
- std::vector< audio_stream_config > audio
 List of audio media stream configs.

10.55.1 Detailed Description

Media stream config.

Definition at line 219 of file config.h.

10.55.2 Field Documentation

10.55.2.1 audio

```
std::vector<audio_stream_config> vxg::cloud::agent::proto::stream_config::audio
```

List of audio media stream configs.

Definition at line 223 of file config.h.

10.55.2.2 video

```
\textbf{std}:: \textbf{vector} < \texttt{video\_stream\_config} > \texttt{vxg}:: \texttt{cloud}:: \texttt{agent}:: \texttt{proto}:: \texttt{stream\_config}:: \texttt{video} = \texttt
```

List of video media stream configs.

Definition at line 221 of file config.h.

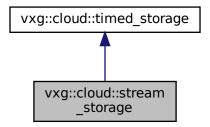

The documentation for this struct was generated from the following file:

10.56 vxg::cloud::stream_storage Class Reference

```
#include <agent/stream-storage.h>
```

Inheritance diagram for vxg::cloud::stream_storage:

Collaboration diagram for vxg::cloud::stream_storage:

Public Types

using ptr = shared_ptr< stream_storage >

Public Member Functions

- stream_storage (agent::media::stream::ptr stream)
- virtual ~stream_storage ()
- virtual std::vector< item_ptr > list (cloud::time start, cloud::time stop) override
- virtual bool load (item_ptr i) override
- virtual bool store (item_ptr) override
- virtual bool store_async (item_ptr, async_store_finished_cb finished_cb, async_store_is_canceled_cb is_
 canceled_cb) override
- virtual void erase (item_ptr)

10.56.1 Detailed Description

Definition at line 10 of file stream-storage.h.

10.56.2 Member Typedef Documentation

10.56.2.1 ptr

using vxg::cloud::stream_storage::ptr = shared_ptr<stream_storage>

Definition at line 25 of file stream-storage.h.

10.56.3 Constructor & Destructor Documentation

10.56.3.1 stream_storage()

Definition at line 26 of file stream-storage.h.

10.56.3.2 ∼stream_storage()

```
virtual vxg::cloud::stream_storage::~stream_storage ( ) [inline], [virtual]
```

Definition at line 27 of file stream-storage.h.

10.56.4 Member Function Documentation

10.56.4.1 erase()

```
virtual void vxg::cloud::stream_storage::erase (
    item_ptr ) [inline], [virtual]
```

Implements vxg::cloud::timed_storage.

Definition at line 64 of file stream-storage.h.

10.56.4.2 list()

Implements vxg::cloud::timed_storage.

Definition at line 29 of file stream-storage.h.

10.56.4.3 load()

Implements vxg::cloud::timed storage.

Definition at line 43 of file stream-storage.h.

10.56.4.4 store()

Implements vxg::cloud::timed_storage.

Definition at line 54 of file stream-storage.h.

10.56.4.5 store_async()

Reimplemented from vxg::cloud::timed_storage.

Definition at line 56 of file stream-storage.h.

The documentation for this class was generated from the following file:

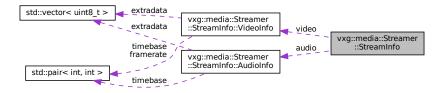

· stream-storage.h

10.57 vxg::media::Streamer::StreamInfo Struct Reference

Stream info description.

```
#include <streamer/base_streamer.h>
```

Collaboration diagram for vxg::media::Streamer::StreamInfo:

Data Structures

struct AudioInfo

Audio stream info.

struct VideoInfo

Video stream info.

Public Types

Data Fields

StreamType type

Stream type.

· VideoInfo video

Video stream info. Should be filled if stream type is ST_VIDEO.

· AudioInfo audio

Audio stream info. Should be filled if stream type is ST_AUDIO.

10.57.1 Detailed Description

Stream info description.

Definition at line 311 of file base streamer.h.

10.57.2 Member Enumeration Documentation

10.57.2.1 AudioCodec

enum vxg::media::Streamer::StreamInfo::AudioCodec

Audio codec.

Enumerator

AC_UNKNOWN	
AC_AAC	
AC_G711_U	
AC_G711_A	
AC_LPCM	
AC_G726	
AC_OPUS	

Definition at line 351 of file base_streamer.h.

10.57.2.2 DataCodec

enum vxg::media::Streamer::StreamInfo::DataCodec

Data codec.

Enumerator

DC_UNKNOWN	
DC_ONVIF	

Definition at line 384 of file base_streamer.h.

10.57.2.3 StreamType

enum vxg::media::Streamer::StreamInfo::StreamType

Stream type.

Enumerator

ST_UNKNOWN	
ST_VIDEO	
ST_AUDIO	
ST_DATA	
ST_ANY	

Definition at line 313 of file base_streamer.h.

10.57.2.4 VideoCodec

enum vxg::media::Streamer::StreamInfo::VideoCodec

Video codec type.

Enumerator

VC_UNKNOWN	
VC_H264	

Definition at line 316 of file base_streamer.h.

10.57.3 Field Documentation

10.57.3.1 audio

AudioInfo vxg::media::Streamer::StreamInfo::audio

Audio stream info. Should be filled if stream type is ST_AUDIO.

Definition at line 399 of file base_streamer.h.

10.57.3.2 type

StreamType vxg::media::Streamer::StreamInfo::type

Stream type.

Definition at line 395 of file base_streamer.h.

10.57.3.3 video

VideoInfo vxg::media::Streamer::StreamInfo::video

Video stream info. Should be filled if stream type is ST_VIDEO.

Definition at line 397 of file base_streamer.h.

The documentation for this struct was generated from the following file:

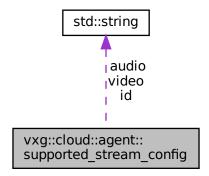

base_streamer.h

10.58 vxg::cloud::agent::supported_stream_config Struct Reference

Supported stream config.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::supported_stream_config:

Data Fields

· std::string id

id: string, name of media stream, unique for the camera

std::string video

video: optional string, video ES that is sent in this media stream

std::string audio

audio: optional string, audio ES that is sent in this media stream

10.58.1 Detailed Description

Supported stream config.

Definition at line 1297 of file config.h.

10.58.2 Field Documentation

10.58.2.1 audio

std::string vxg::cloud::agent::supported_stream_config::audio

audio: optional string, audio ES that is sent in this media stream

Definition at line 1303 of file config.h.

10.58.2.2 id

```
std::string vxg::cloud::agent::supported_stream_config::id
```

id: string, name of media stream, unique for the camera

Definition at line 1299 of file config.h.

10.58.2.3 video

```
std::string vxg::cloud::agent::supported_stream_config::video
```

video: optional string, video ES that is sent in this media stream

Definition at line 1301 of file config.h.

10.66 vxg::cloud::agent::proto::video_caps Struct Reference

Video image capabilities.

#include <agent-proto/objects/caps.h>

Collaboration diagram for vxg::cloud::agent::proto::video_caps:

Data Fields

std::vector< mode > vert_flip

vert_flip: list of string, supported vertical flip modes, possible values ["off", "on", "auto"]

std::vector < mode > horz flip

horz_flip: list of string, supported horizontal flip modes, possible values ["off", "on", "auto"]

std::vector< std::string > tdn

tdn: list of string, supported TDM modes, possible values ["day", "night", "auto"]

std::vector < mode > ir_light

ir_light: list of string, supported IR light modes, possible values ["off", "on", "auto"]

· bool brightness

brightness: bool, True when camera supports brightness control

· bool contrast

contrast: bool, True when camera supports contrast control

· bool saturation

saturation: bool, True when camera supports saturation control

bool sharpness

sharpness: bool, True when camera supports sharpness control

std::vector< std::string > nr_type

nr_type: list of string, supported noise reduce types.

bool nr level

nr_level: bool, True when noise reduce filter assumes control of NR level

std::vector< std::string > wb_type

wb_type: list of string, supported white balance types.

· bool pwr_frequency

pwr_frequency: bool, True camera supports compensation of images flickering due to flashing of lamps in indoor environment

10.66.1 Detailed Description

Video image capabilities.

Definition at line 366 of file caps.h.

10.66.2 Field Documentation

10.66.2.1 brightness

bool vxg::cloud::agent::proto::video_caps::brightness

brightness: bool, True when camera supports brightness control

Definition at line 384 of file caps.h.

10.66.2.2 contrast

```
bool vxg::cloud::agent::proto::video_caps::contrast
```

contrast: bool, True when camera supports contrast control

Definition at line 387 of file caps.h.

10.66.2.3 horz flip

```
std::vector<mode> vxg::cloud::agent::proto::video_caps::horz_flip
```

horz_flip: list of string, supported horizontal flip modes, possible values ["off", "on", "auto"]

Definition at line 373 of file caps.h.

10.66.2.4 ir_light

```
std::vector<mode> vxg::cloud::agent::proto::video_caps::ir_light
```

ir_light: list of string, supported IR light modes, possible values ["off", "on", "auto"]

Definition at line 381 of file caps.h.

10.66.2.5 nr_level

```
bool vxg::cloud::agent::proto::video_caps::nr_level
```

nr_level: bool, True when noise reduce filter assumes control of NR level

Definition at line 402 of file caps.h.

10.66.2.6 nr_type

```
std::vector< std::string> vxg::cloud::agent::proto::video_caps::nr_type
```

nr_type: list of string, supported noise reduce types.

Empty list when camera doesn't support it. Example: ["off", "normal", "expert"]

Definition at line 398 of file caps.h.

10.66.2.7 pwr_frequency

```
bool vxg::cloud::agent::proto::video_caps::pwr_frequency
```

pwr_frequency: bool, True camera supports compensation of images flickering due to flashing of lamps in indoor environment

Definition at line 411 of file caps.h.

10.66.2.8 saturation

```
bool vxg::cloud::agent::proto::video_caps::saturation
```

saturation: bool, True when camera supports saturation control

Definition at line 390 of file caps.h.

10.66.2.9 sharpness

```
bool vxg::cloud::agent::proto::video_caps::sharpness
```

sharpness: bool, True when camera supports sharpness control

Definition at line 393 of file caps.h.

10.66.2.10 tdn

```
std::vector< std::string> vxg::cloud::agent::proto::video_caps::tdn
```

tdn: list of string, supported TDM modes, possible values ["day", "night", "auto"]

Definition at line 377 of file caps.h.

10.66.2.11 vert_flip

```
std::vector<mode> vxg::cloud::agent::proto::video_caps::vert_flip
```

vert_flip: list of string, supported vertical flip modes, possible values ["off", "on", "auto"]

Definition at line 369 of file caps.h.

10.66.2.12 wb_type

```
std::vector< std::string> vxg::cloud::agent::proto::video_caps::wb_type
```

wb_type: list of string, supported white balance types.

Empty list when camera doesn't support it. Example: ["auto", "3200K (Indor)", "4200K (Fluo)", "5600K (Outdoor)"]

Definition at line 407 of file caps.h.

The documentation for this struct was generated from the following file:

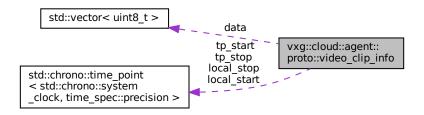

· caps.h

10.67 vxg::cloud::agent::proto::video_clip_info Struct Reference

Video recoding(mp4 file) clip description,.

```
#include <agent-proto/objects/config.h>
```

Collaboration diagram for vxg::cloud::agent::proto::video_clip_info:

Data Fields

· cloud::time tp_start

Clip start time UTC.

cloud::time tp_stop

Clip stop time UTC.

· cloud::time local start

Clip start time local.

cloud::time local_stop

Clip stop time local.

· int video_width

Video clip picture width.

· int video_height

Video clip picture height.

std::vector< uint8_t > data

Video data buffer, we use move semantics internally so no data copying will be invoked.

10.67.1 Detailed Description

Video recoding(mp4 file) clip description,.

Definition at line 449 of file config.h.

10.67.2 Field Documentation

10.67.2.1 data

```
std::vector<uint8_t> vxg::cloud::agent::proto::video_clip_info::data
```

Video data buffer, we use move semantics internally so no data copying will be invoked.

Definition at line 475 of file config.h.

10.67.2.2 local_start

```
cloud::time vxg::cloud::agent::proto::video_clip_info::local_start
```

Clip start time local.

Definition at line 463 of file config.h.

10.67.2.3 local_stop

```
cloud::time vxg::cloud::agent::proto::video_clip_info::local_stop
```

Clip stop time local.

Definition at line 466 of file config.h.

10.67.2.4 tp_start

```
cloud::time vxg::cloud::agent::proto::video_clip_info::tp_start
```

Clip start time UTC.

Definition at line 458 of file config.h.

10.67.2.5 tp_stop

cloud::time vxg::cloud::agent::proto::video_clip_info::tp_stop

Clip stop time UTC.

Definition at line 460 of file config.h.

10.67.2.6 video_height

int vxg::cloud::agent::proto::video_clip_info::video_height

Video clip picture height.

Definition at line 471 of file config.h.

10.67.2.7 video width

 $\verb"int vxg::cloud::agent::proto::video_clip_info::video_width"$

Video clip picture width.

Definition at line 469 of file config.h.

The documentation for this struct was generated from the following file:

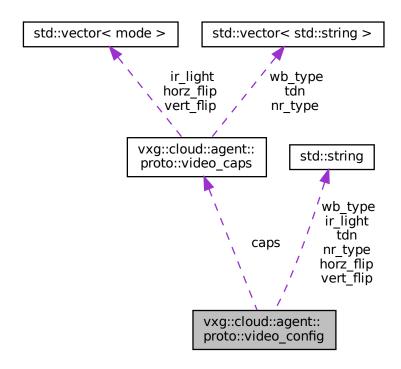

config.h

10.68 vxg::cloud::agent::proto::video_config Struct Reference

Video image config.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::proto::video_config:

Data Fields

```
· std::string vert flip
```

vert_flip: optional string, vertical image flip mode: ["off", "on", "auto"]

std::string horz_flip

horz_flip: optional string, horizontal image flip mode: ["off", "on", "auto"]

std::string tdn

tdn: optional string, possible values ["day", "night", "auto"]

std::string ir_light

ir light: optional string, IR light for night conditions ["off", "on", "auto"]

· int brightness

brightness: optional int, a brightness value from range 0-100 (%)

· int contrast

contrast: optional int, a contrast value from range 0-100 (%)

· int saturation

saturation: optional int, a saturation value from range 0-100 (%)

· int sharpness

sharpness: optional int, a sharpness value from range 0-100 (%)

std::string nr_type

nr_type: optional string, one of predefined noise reduce types from caps

· int nr level

nr_level: optional int, level of noise reduce when filter requires it 0-100 (%)

std::string wb_type

wb_type: optional string, one of predefined white balance types from caps

int pwr_frequency

pwr_frequency: optional int, power line frequency [50, 60] (Hz)

• video_caps caps

caps

10.68.1 Detailed Description

Video image config.

Definition at line 306 of file config.h.

10.68.2 Field Documentation

10.68.2.1 brightness

```
int vxg::cloud::agent::proto::video_config::brightness
```

brightness: optional int, a brightness value from range 0-100 (%)

Definition at line 323 of file config.h.

10.68.2.2 caps

```
video_caps vxg::cloud::agent::proto::video_config::caps
```

caps

Definition at line 349 of file config.h.

10.68.2.3 contrast

```
int vxg::cloud::agent::proto::video_config::contrast
```

contrast: optional int, a contrast value from range 0-100 (%)

Definition at line 326 of file config.h.

10.68.2.4 horz_flip

```
std::string vxg::cloud::agent::proto::video_config::horz_flip
horz_flip: optional string, horizontal image flip mode: ["off", "on", "auto"]
Definition at line 313 of file config.h.
```

10.68.2.5 ir_light

```
std::string vxg::cloud::agent::proto::video_config::ir_light
ir_light: optional string, IR light for night conditions ["off", "on", "auto"]
Definition at line 320 of file config.h.
```

10.68.2.6 nr_level

```
int vxg::cloud::agent::proto::video_config::nr_level
nr_level: optional int, level of noise reduce when filter requires it 0-100 (%)
Definition at line 339 of file config.h.
```

10.68.2.7 nr_type

```
std::string vxg::cloud::agent::proto::video_config::nr_type
nr_type: optional string, one of predefined noise reduce types from caps
Definition at line 335 of file config.h.
```

10.68.2.8 pwr_frequency

```
int vxg::cloud::agent::proto::video_config::pwr_frequency
pwr_frequency: optional int, power line frequency [50, 60] (Hz)

Definition at line 346 of file config.h.
```

10.68.2.9 saturation

int vxg::cloud::agent::proto::video_config::saturation
saturation: optional int, a saturation value from range 0-100 (%)
Definition at line 329 of file config.h.

10.68.2.10 sharpness

int vxg::cloud::agent::proto::video_config::sharpness
sharpness: optional int, a sharpness value from range 0-100 (%)
Definition at line 332 of file config.h.

10.68.2.11 tdn

```
std::string vxg::cloud::agent::proto::video_config::tdn
tdn: optional string, possible values ["day", "night", "auto"]
Definition at line 316 of file config.h.
```

10.68.2.12 vert_flip

```
std::string vxg::cloud::agent::proto::video_config::vert_flip
vert_flip: optional string, vertical image flip mode: ["off", "on", "auto"]
Definition at line 309 of file config.h.
```

10.68.2.13 wb_type

```
std::string vxg::cloud::agent::proto::video_config::wb_type
wb_type: optional string, one of predefined white balance types from caps
Definition at line 343 of file config.h.
```

The documentation for this struct was generated from the following file:

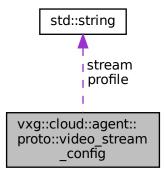

config.h

10.69 vxg::cloud::agent::proto::video_stream_config Struct Reference

Video stream config.

#include <agent-proto/objects/config.h>

Collaboration diagram for vxg::cloud::agent::proto::video stream config:

Data Fields

std::string stream

Mandatory: video ES to use.

· video_format format

Mandatory: video encoding format.

std::string profile

Optional: profile that specifies format, when format assumes it.

• int horz

Mandatory: int (horz) - video resolution width x height.

· int vert

Mandatory: int (vert) - video resolution width x height.

• double fps

Mandatory: framerate.

bool vbr

Mandatory: prefer VBR; if false or not set CBR should be used.

int gop

Mandatory: gop size (I-Frame interval);.

int brt

Optional: bitrate, kbps.

• int vbr_brt

Optional: bitrate for VBR, kbps.

· int quality

Optional: int [-4..4], quality profile hint for encoder, where 0 means normal.

· int smoothing

Optional: a smoothing value from range 0-100 (%)

10.69.1 Detailed Description

Video stream config.

Definition at line 83 of file config.h.

10.69.2 Field Documentation

10.69.2.1 brt

int vxg::cloud::agent::proto::video_stream_config::brt

Optional: bitrate, kbps.

Definition at line 117 of file config.h.

10.69.2.2 format

video_format vxg::cloud::agent::proto::video_stream_config::format

Mandatory: video encoding format.

Definition at line 90 of file config.h.

10.69.2.3 fps

double vxg::cloud::agent::proto::video_stream_config::fps

Mandatory: framerate.

Definition at line 105 of file config.h.

10.69.2.4 gop

int vxg::cloud::agent::proto::video_stream_config::gop

Mandatory: gop size (I-Frame interval);.

Definition at line 113 of file config.h.

10.69.2.5 horz

```
int vxg::cloud::agent::proto::video_stream_config::horz
```

Mandatory: int (horz) - video resolution width x height.

Definition at line 98 of file config.h.

10.69.2.6 profile

```
std::string vxg::cloud::agent::proto::video_stream_config::profile
```

Optional: profile that specifies format, when format assumes it.

Definition at line 94 of file config.h.

10.69.2.7 quality

```
int vxg::cloud::agent::proto::video_stream_config::quality
```

Optional: int [-4..4], quality profile hint for encoder, where 0 means normal.

Definition at line 125 of file config.h.

10.69.2.8 smoothing

```
int vxg::cloud::agent::proto::video_stream_config::smoothing
```

Optional: a smoothing value from range 0-100 (%)

Definition at line 129 of file config.h.

10.69.2.9 stream

```
std::string vxg::cloud::agent::proto::video_stream_config::stream
```

Mandatory: video ES to use.

Definition at line 86 of file config.h.

10.69.2.10 vbr

bool vxg::cloud::agent::proto::video_stream_config::vbr

Mandatory: prefer VBR; if false or not set CBR should be used.

Definition at line 109 of file config.h.

10.69.2.11 vbr_brt

int vxg::cloud::agent::proto::video_stream_config::vbr_brt

Optional: bitrate for VBR, kbps.

Definition at line 121 of file config.h.

10.69.2.12 vert

int vxg::cloud::agent::proto::video_stream_config::vert

Mandatory: int (vert) - video resolution width x height.

Definition at line 101 of file config.h.

10.70 vxg::media::Streamer::StreamInfo::VideoInfo Struct Reference

Video stream info.

#include <streamer/base_streamer.h>

Collaboration diagram for vxg::media::Streamer::StreamInfo::VideoInfo:

Data Fields

VideoCodec codec

Video codec type.

· int width

Video width if needed.

· int height

Video height if needed.

• std::pair< int, int > framerate

Video framerate if needed.

· int bitrate

Video bitrate if needed.

• std::pair< int, int > timebase

Timescale of the timestamps, source fills it with timescale of timestamps source receives, MediaFrame::pts should use this timescale.

std::vector< uint8_t > extradata

Can be AVC1 extradata or SPS/PPS, source fills it and sink should know and understand this format.

10.70.1 Detailed Description

Video stream info.

This structure as well as ISink::negotiate method aimed to inform sink about streams source provides, if sink don't care the values of this structure may be ignored.

Definition at line 325 of file base_streamer.h.

10.70.2 Field Documentation

10.70.2.1 bitrate

int vxg::media::Streamer::StreamInfo::VideoInfo::bitrate

Video bitrate if needed.

Definition at line 335 of file base_streamer.h.

10.70.2.2 codec

VideoCodec vxg::media::Streamer::StreamInfo::VideoInfo::codec

Video codec type.

Definition at line 327 of file base_streamer.h.

10.70.2.3 extradata

```
std::vector<uint8_t> vxg::media::Streamer::StreamInfo::VideoInfo::extradata
```

Can be AVC1 extradata or SPS/PPS, source fills it and sink should know and understand this format.

Definition at line 342 of file base streamer.h.

10.70.2.4 framerate

```
std::pair<int, int> vxg::media::Streamer::StreamInfo::VideoInfo::framerate
```

Video framerate if needed.

Definition at line 333 of file base streamer.h.

10.70.2.5 height

int vxg::media::Streamer::StreamInfo::VideoInfo::height

Video height if needed.

Definition at line 331 of file base_streamer.h.

10.70.2.6 timebase

```
std::pair<int, int> vxg::media::Streamer::StreamInfo::VideoInfo::timebase
```

Timescale of the timestamps, source fills it with timescale of timestamps source receives, MediaFrame::pts should use this timescale.

Definition at line 339 of file base_streamer.h.

10.70.2.7 width

int vxg::media::Streamer::StreamInfo::VideoInfo::width

Video width if needed.

Definition at line 329 of file base_streamer.h.

Data Structures

struct alter_bool

alternative bool class Standard bool type has two states, this class adds 3rd state - undefined.

Namespaces

- vxg
- vxg::cloud
- vxg::cloud::time_spec

time point

Functions

- std::string unset_value_for_impl (std::string *)
- int unset_value_for_impl (int *)

Returns value of int type that can be treated as unset.

- double unset_value_for_impl (double *)
- uint64 t unset value for impl (uint64 t *)
- int64_t unset_value_for_impl (int64_t *)
- vxg::cloud::time unset_value_for_impl (vxg::cloud::time *)
- vxg::cloud::duration unset_value_for_impl (vxg::cloud::duration *)

```
nlohmann::json unset_value_for_impl (nlohmann::json *)
• template<typename T >
 T unset_value_for ()
      Template function which returns object value treated as 'unset' or uninitialized.
• template<typename T >
 std::vector< T > unset_value_for_impl ( std::vector< T > *)
• template<typename T >
  T unset_value_for_impl (T *)
• template<typename T >
  bool __is_unset (T)
     Used for objects constructed from json, helps to check if original json object has specific field.

    template<> bool __is_unset< int > (int t)

     Predicate function checks if int value was not initialized.

    template<> bool __is_unset< std::string > ( std::string t)

    template<> bool __is_unset< double > (double t)

    template<> bool __is_unset< vxg::cloud::time > (vxg::cloud::time t)

    template<> bool is unset< vxg::cloud::duration > (vxg::cloud::duration t)

    template<> bool __is_unset< nlohmann::json > (nlohmann::json t)

    template<> bool __is_unset< std::nullptr_t > ( std::nullptr_t t)

• template<typename T >
 bool __is_unset (nlohmann::json t)

    template<> bool __is_unset< alter_bool > (alter_bool t)
```

11.31.1 Function Documentation

11.31.1.1 __is_unset() [1/2]

Definition at line 155 of file unset-helper.h.

334 File Documentation

11.31.1.2 __is_unset() [2/2]

Used for objects constructed from json, helps to check if original json object has specific field.

You need to declare template specification for new types.

See also

```
__is_unset<int>(int t)
```

Template Parameters

```
T object of type
```

Returns

true If object's field was actually set during construction, i.e. original json has such field in it's body. false If object's field wasn't set, original json has no such field. It's also possible that json has such field but its value is set to value treated as unset value.

See also

```
__is_unset<>()
```

Definition at line 104 of file unset-helper.h.

11.31.1.3 __is_unset< alter_bool >()

Definition at line 219 of file unset-helper.h.

11.31.1.4 __is_unset< double >()

Definition at line 126 of file unset-helper.h.

11.31.1.5 __is_unset< int >()

Predicate function checks if int value was not initialized.

Template Parameters

int	
-----	--

Parameters

```
t
```

Returns

true value is uninitalized. false value is initialized.

See also

```
unset_value_for<int>()
```

Definition at line 116 of file unset-helper.h.

11.31.1.6 __is_unset< nlohmann::json >()

Definition at line 141 of file unset-helper.h.

11.31.1.7 __is_unset< std::nullptr_t >()

Definition at line 150 of file unset-helper.h.

11.31.1.8 __is_unset< std::string >()

Definition at line 121 of file unset-helper.h.

336 File Documentation

11.31.1.9 __is_unset< vxg::cloud::duration >()

Definition at line 136 of file unset-helper.h.

11.31.1.10 __is_unset< vxg::cloud::time >()

Definition at line 131 of file unset-helper.h.

11.31.1.11 unset_value_for()

```
template<typename T >
T unset_value_for ( )
```

Template function which returns object value treated as 'unset' or uninitialized.

Template Parameters

Returns

T Value equals to conditionally 'unset'.

Definition at line 73 of file unset-helper.h.

11.31.1.12 unset_value_for_impl() [1/10]

Definition at line 39 of file unset-helper.h.

11.31.1.13 unset_value_for_impl() [2/10]

Returns value of int type that can be treated as unset.

Returns

int

Definition at line 35 of file unset-helper.h.

11.31.1.14 unset_value_for_impl() [3/10]

Definition at line 47 of file unset-helper.h.

11.31.1.15 unset_value_for_impl() [4/10]

Definition at line 62 of file unset-helper.h.

11.31.1.16 unset_value_for_impl() [5/10]

Definition at line 27 of file unset-helper.h.

11.31.1.17 unset_value_for_impl() [6/10]

Definition at line 78 of file unset-helper.h.

338 File Documentation

11.31.1.18 unset_value_for_impl() [7/10]

```
template<typename T > T unset_value_for_impl ( T * )
```

Definition at line 85 of file unset-helper.h.

11.31.1.19 unset_value_for_impl() [8/10]

Definition at line 43 of file unset-helper.h.

11.31.1.20 unset_value_for_impl() [9/10]

Definition at line 57 of file unset-helper.h.

11.31.1.21 unset_value_for_impl() [10/10]

Definition at line 51 of file unset-helper.h.

11.31.2 Variable Documentation

11.31.2.1 UnsetDouble

const double UnsetDouble

Definition at line 229 of file unset-helper.h.

11.31.2.2 UnsetDuration

const vxg::cloud::duration UnsetDuration

Definition at line 225 of file unset-helper.h.

11.31.2.3 UnsetFloat

const double UnsetFloat

Definition at line 228 of file unset-helper.h.

11.31.2.4 UnsetInt

const int UnsetInt

Definition at line 227 of file unset-helper.h.

11.31.2.5 UnsetInt64

const int64_t UnsetInt64

Definition at line 231 of file unset-helper.h.

11.31.2.6 UnsetString

const std::string UnsetString

Definition at line 223 of file unset-helper.h.

11.31.2.7 UnsetTime

const vxg::cloud::time UnsetTime

Definition at line 224 of file unset-helper.h.

340 File Documentation

11.31.2.8 UnsetUInt64

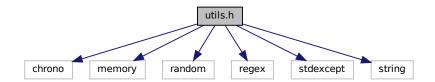

const uint64_t UnsetUInt64

Definition at line 230 of file unset-helper.h.
